

Environmental Affairs Policy

MTS Sensors as a developer, manufacturer and distributor of position, level and angle sensors, is committed to complying with all environmental legislation and regulations that may apply to the industry (national and international). MTS Sensors is an environmentally responsible neighbor in the communities where we operate, and act promptly and responsibly to prevent incidents or conditions that endanger health, safety or the environment.

MTS develops, manufactures, and markets products that are safe for their intended use, efficient in their use of energy, protective of the environment, and that can be reused, recycled or disposed of safely.

MTS designs products in a way that minimizes their environmental impacts in production, use and disposal. MTS responsibly selects raw materials, preferring recyclable materials and excluding restricted and harmful substances. MTS products comply to the RoHS2 guideline (2011/65/EC), do not contain substances listed in the SVHC-list of the REACH guideline, are asbestos free and free of ozone-depleting substances.

MTS uses development and manufacturing processes that do not adversely affect the environment, including developing and improving operations and technologies to minimize waste, reduce chemical consumption, prevent air, water, and other pollution, minimize health and safety risks, and dispose of waste safely and responsibly. MTS' manufacturing processes do not cause any air emissions, water consumption, water discharges or other pollution.

MTS provides a safe and healthful workplace and ensures that personnel are properly trained and have appropriate safety and emergency equipment.

MTS ensures the responsible use of energy throughout our business, including conserving energy, improving energy efficiency, and giving preference to renewable over non-renewable energy sources when feasible.

Environmental considerations are integrated into business planning and decision making at existing locations and in planning new operations.
