1. Introduction

1.1 Purpose and use of this manual

Before starting the operation of Temposonics position sensors read this documentation thoroughly and follow the safety information. Keep the manual for future reference!

The content of this technical documentation and of its appendix is intended to provide information on mounting, installation and commissioning by qualified automation personnel or instructed service technicians who are familiar with the project planning and dealing with Temposonics sensors.

1.2 Used symbols and warnings

Warnings are intended for your personal safety and for avoidance of damage to the described product or connected devices. In this documentation, safety information and warnings to avoid danger that might affect the life and health of operating as well as service personnel or cause material damage are highlighted by the preceding pictogram, which is defined below.

Symbol Meaning

NOTICE This symbol is used to point to situations that may lead to material damage, but not to personal injury.

2. Safety instructions

2.1 Intended use

This product may be used only for the applications defined under item 1 to item 4 and only in conjunction with the third-party devices and components recommended or approved by Temposonics. As a prerequisite of proper and safe operation, the product requires correct transport, storage, mounting and commissioning and must be operated with utmost care.

1. The sensor systems of all Temposonics® series are intended exclusively for measurement tasks encountered in industrial, commercial and laboratory applications. The sensors are considered as system accessories and must be connected to suitable evaluation electronics, e.g. a PLC, IPC, indicator or other electronic control unit.

2. The sensor’s surface temperature class is T4.

3. The ATEX, UK Ex, IECEx, CEC, NEC and CCC certificates have to be taken into account, including any special conditions defined therein, as well as chapter “2.3 Installation, commissioning and operation” on page 4.

4. The position sensor may be used in hazardous areas according to Fig. 35. Any use of this product outside of these approved areas will void the warranty and all manufacturer’s product responsibilities and liabilities. For non-hazardous areas Temposonics recommends to use the version N (not approved).

The position sensors must be used only in technically safe condition. To maintain this condition and to ensure safe operation, installation, connection and service, work may be performed only by qualified technical personnel, according to IEC 60079-14, IEC 60079-17, TRBS 1203, Canadian Electrical Code (CEC), National Electrical Code (NEC), China Compulsory Certification (CCC) and local regulations.

If danger of injury to persons or of damage to operating equipment is caused by sensor failure or malfunction, additional safety measures such as plausibility checks, limit switches, EMERGENCY STOP systems, protective devices etc. are required. In the event of trouble, such as plausibility checks, limit switches, EMERGENCY STOP is caused by sensor failure or malfunction, additional safety measures are required. In the event of trouble, such as plausibility checks, limit switches, EMERGENCY STOP systems, protective devices etc. are required.

Safety instructions for commissioning
To maintain the sensor's operability, it is mandatory to follow the instructions given below.
1. Follow the specifications given in the technical data.
2. Ensure that equipment and associated components used in a hazardous environment are selected and installed in compliance with regulations governing the geographical location and facility. Only install equipment that complies with the types of protection relevant to the applicable Zones and Categories.
3. In explosive atmospheres use only such auxiliary components that meet all requirements of the local and national standards.
4. The potential equalisation of the system has to be established according to the regulations of erection applicable in the respective country of use (VDE 0100, part 540; IEC 364-5-54).
5. Sensors from Temposonics are approved only for the intended use in industrial environments (see chapter “2.1 Intended use” on page 3). Contact the manufacturer for advice, if aggressive substances are present in the sensor environment.
6. Measures for lightning protection have to be taken by the user.
7. The user is responsible for the mechanical protection of the sensor.
8. The cable gland of the sensor must be protected against any external impact energy exceeding 4 J. The maximum thermal load of the cables must be taken into account.
9. The user is responsible for meeting all safety conditions as outlined by:
   - Installation instructions
   - Local prevailing standards and regulations
10. Any parts of the equipment which got stuck (e.g. by frost or corrosion) may not be removed by force if potentially explosive atmosphere is present.
11. The formation of ice on the equipment has to be prevented.
12. It is not allowed to open the sensor.
13. The connecting cable has to be either led out of the hazardous area uncut or wired to outlets which comply with the type of protection required locally.
14. The surface temperatures of equipment parts must be kept clearly below the ignition temperature of the foreseeable air/dust mixtures in order to prevent the ignition of suspended dust.

How to ensure safe commissioning
1. Protect the sensor against mechanical damage during installation and operation.
2. Do not use damaged products and secure them against unintentional commissioning. Mark damaged products as being defective.
3. Prevent electrostatic charges.
4. Do not use the sensor in cathodic systems for corrosion protection. Do not led parasitic currents via the construction.
5. Switch off the supply voltage prior to disconnecting or connecting the equipment.
6. Connect the sensor very carefully and pay attention to the polarity of connections, power supply as well as where appropriate to the shape and duration of control pulses.
7. Use only approved power supplies.
8. Ensure that the specified permissible limit values of the sensor for supply voltage, environmental conditions, etc. are met.
9. Make sure that:
   - the sensor and associated components were installed according to the instructions
   - the sensor enclosure is clean
   - the magnet does not grind on the rod. This could cause damage to the magnet and the sensor rod. If there is contact between the moving magnet including the magnet holder and the sensor rod, make sure that the maximal speed of the moving magnet is less or equal 1 m/s.
10. Ground the sensor via the ground lug. Both the sensor and the moving magnet including magnet holder must be connected to protective ground (PE) to avoid electrostatic discharge (ESD).
11. Before applying power, ensure that nobody’s safety is jeopardized by starting machines.
12. Check the function of the sensor regularly and provide documentation of the checks.
   (see chapter “6.2 Maintenance” on page 21).
2.4 Safety instructions for use in explosion-hazardous areas

The sensor has been designed for operation inside explosion-hazarded areas. It has been tested and left the factory in a condition in which it is safe to operate. Relevant regulations and European standards as well as Canadian and North American standards have been observed. According to Ex marking (see chapter “2.1 Intended use” on page 3) and the ATEX und UK Ex certificates (attached to this document), the sensor is approved only for operation in defined hazardous areas. All other certificates can be found at: www.temposonics.com.

2.5 Warranty

Temposonics grants a warranty period for the position sensors and supplied accessories relating to material defects and faults that occur despite correct use in accordance with the intended application. The Temposonics obligation is limited to repair or replacement of any defective part of the unit. No warranty can be provided for defects that are due to improper use or above average stress of the product, as well as for wear parts. Under no circumstances will Temposonics accept liability in the event of offense against the warranty rules, no matter if these have been assured or expected, even in case of fault or negligence of the company. Temposonics explicitly excludes any further warranties. Neither the company’s representatives, agents, dealers nor employees are authorized to increase or change the scope of warranty.

2.6 Return

For diagnostic purposes, the sensor can be returned to Temposonics. Any shipment cost is the responsibility of the sender. For a corresponding form, see chapter “9. Appendix” on page 24.

NOTICE

When returning sensors, place protective caps on male and female connectors of the sensor. For pigtail cables, place the cable ends in a static shielding bag for electrostatic discharge (ESD) protection. Fill the outer packaging around the sensor completely to prevent damage during transport.

- Temposonics® E-Series ET-P (profile sensor)

Stroke length
- 50…3000 mm (2…118 in.)

Output signal
- SSI

Application
Temposonics position sensors are used for measurement and conversion of the length (position) variable in the fields of automated systems and mechanical engineering.

Principle of operation and system construction
The absolute, linear position sensors provided by Temposonics rely on the company’s proprietary Temposonics® magnetostrictive technology, which can determine position with a high level of precision and robustness. Each position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the

length of the waveguide. When the ultrasonic wave reaches the end of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

Modular mechanical and electronic construction
- The sensor profile or rod protects the inner sensor element.
- The sensor electronics housing, a rugged stainless steel construction, contains the complete electronic interface with active signal conditioning.
- The external position magnet is a permanent magnet. Mounted on the mobile machine part, it travels along the sensor profile or rod and triggers the measurement through the sensor profile/rod wall.
- The sensor can be connected directly to a control system. Its electronics generates a strictly position proportional signal output between start and end position.
4.2 Installation and design of Temposonics® ET (rod sensor)

**Installation of ET with threaded flange »F«, »M«, »S« & »W«**

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Lightly oil the thread before tightening. Lightly oil the thread before tightening.

**Installation of a rod-style sensor in a fluid cylinder**

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.

---

**ET-F/-M/-S/-W, example: Version A/N**

![Diagram](image1)

**ET-F/-M/-S/-W, example: Version E**

![Diagram](image2)
Hydraulics sealing

There are two ways to seal the flange contact surface (Fig. 7):

1. A sealing by using an O-ring (e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.

2. A sealing by using an O-ring in the undercut.
   - For threaded flange (¾"-16 UNF-3A) → F/-/S-:
     O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)
   - For threaded flange (M18×1.5-6g) → M/-/W-:
     O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

Fig. 7: Possibilities of sealing

- Note the fastening torque of 75 Nm.
- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling (≥ Ø 13 mm (≥ Ø 0.51 in.)) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 8). See ISO 6149-1 for further information.

4.3 Installation and design of Temposonics® ET (profile sensor)

Installation of ET-P (profile sensor)
The position sensor can be installed in any position. Normally, the sensor is firmly installed and the position magnet is fastened to the mobile machine part. Thus it can travel along the sensor profile. The sensor is fitted on a flat machine surface using the mounting clamps (Fig. 10). A length-dependent number of these clamps are delivered with the sensor and must be distributed over the profile at regular distances. For fastening we recommend using M5×20 screws (DIN 6912) that should be tightened with a fastening torque of 5 Nm.

Alternative:
If only limited space is available, the profile sensor can be mounted also via the T-rail in the profile bottom using an T-slot nut M5 (part no. 401 602) or a sliding block (Fig. 11).

NOTICE
Take care to mount the sensor in an axially parallel position to avoid damage to magnet and sensor.
4.4 Magnet installation

Mounting ring magnets, U-magnets & block magnets

Install the magnet using non-magnetic material for mounting device, screws, spacers etc.. The magnet must not grind on the sensor rod. Alignment errors are compensated via the air gap.
• Permissible surface pressure: Max. 40 N/mm² (only for ring magnets and U-magnets)
• Fastening torque for M4 screws: 1 Nm; use washers, if necessary
• Minimum distance between position magnet and any magnetic material has to be 15 mm (0.6 in.) (Fig. 15).
• If no other option exists and magnetic material is used, observe the specified dimensions (Fig. 15).

NOTICE
• Mount ring magnets and U-magnets concentrically.
• Mount block magnets centrically over the sensor rod or the sensor profile. The maximum permissible air gap must not be exceeded (Fig. 13/Fig. 14). Take care to mount the primary sensor axis in parallel to the magnet path in order to avoid damage to the carriage, magnet and sensor rod profile.

Rod sensors with stroke lengths ≥ 1 meter (3.3 ft.)

Support horizontally installed sensors with a stroke length of 1 meter (3.3 ft.) and more mechanically at the rod end. Without using a support, the sensor rod bends over and the rod and the position magnet may be damaged. A false measurement result is also possible. Longer rods require evenly distributed mechanical support over the entire length (e.g. part no. 561 481). Use an U-magnet (Fig. 16) for measurement.
Start and end positions of the position magnets
Consider the start and end positions of the position magnets during the installation. To ensure that the entire stroke length is electrically usable, the position magnet must be mechanically mounted as follows.

**ET-F/-W/-M/-S with ring magnet & U-magnet**

Start position: 51 (2)  
End position: 63.5 (2.5)

**ET-F/-W/-M/-S with block magnet**

Start position: 48.5 (1.91)  
End position: 66 (2.6)

**ET-P with magnet slider “S”, “N”, “V”, “G”**

Start position: 12 (0.47)  
End position: 82 (3.23)

**ET-P with U-magnet**

Start position: 28 (1)  
End position: 66 (2.6)

**ET-P with block magnet**

Start position: 25.5 (1)  
End position: 68.5 (2.7)

**Multi-position measurement**

The minimum distance between the magnets is 75 mm (3 in.) (used with all types of magnets).

**ET-F/-W/-M/-S with ring magnet / U-magnet**

Fig. 18: Examples: Minimum distance for multi-position measurement

**NOTICE**

For multi-position measurement, use magnets of the same type. Do not underscore the minimum distance between the magnets of 75 mm (3 in.) for multi-position measurement. Contact Temposonics if you need a magnet distance < 75 mm (3 in.).

### 4.5 Electrical connection

Placement of installation and cabling have decisive influence on the sensor’s electromagnetic compatibility (EMC). Hence correct installation of this active electronic system and the EMC of the entire system must be ensured by using suitable metal connectors, shielded cables and grounding. Overvoltages or faulty connections can damage the sensor electronics despite protection against wrong polarity.

**NOTICE**

1. Do not mount the sensors in the area of strong magnetic or electric noise fields.  
2. Never connect/disconnect the sensor when voltage is applied.

**Instruction for connection**

- Connect the shield to ground externally via the controller equipment.  
- Keep control and signal leads separate from power cables and sufficiently far away from motor cables, frequency inverters, valve lines, relays, etc...  
- Use only connectors with metal housing, if you use a connector. Connect the shielding to the connector housing.  
- Keep all non-shielded leads as short as possible.  
- Keep the earth connection as short as possible with a large cross section. Avoid ground loops.  
- With potential differences between machine and electronics earth connections, no compensating currents are allowed to flow across the cable shielding.  

**Recommendation:**

Install potential compensating leads with large cross section.  
- Use only stabilized power supplies in compliance with the specified electrical ratings.
**Grounding of rod sensors**

Connect the sensor electronics housing to machine ground. Ground sensor type ET version A (with ATEX/UK Ex/IECEx/CEC/NEC/CCC approval) via ground lug as shown in Fig. 19. Ground the sensor type ET version N (not approved) via ground lug as shown in Fig. 19 or via thread. Ground sensor type ET version E (with ATEX/UK Ex/IECEx/CEC/NEC/CCC approval) via ground lug as shown in Fig. 20.

*Fig. 19: Grounding via ground lug (version A, N)*

*Fig. 20: Grounding via ground lug (version E)*

**Connector wiring**

Connect the sensor directly to the controller, indicator or other evaluating systems as follows:

#### Programming tool (Not approved for use in hazardous environments)

**Programming kit**  
Part no. 254 590

Kit includes:
- 1 × interface converter box  
- 1 × power supply  
- 1 × cable (60 cm) with M12 female connector (8 pin), straight – D-sub female connector (9 pin), straight  
- 1 × cable (60 cm) with M16 female connector (7 pin), straight – D-sub female connector (9 pin), straight  
- 1 × cable (60 cm) with 6 × terminal clamp – D-sub female connector (9 pin), straight  
- 1 × USB cable

Software is available at:  
www.temposonics.com

Controlling design dimensions are in millimeters and measurements in ( ) are in inches
5. Operation

5.1 Getting started

The sensor is factory-set to its order sizes and adjusted, i.e. the distance between magnet and flange is specified in resolution steps. **Example:** SSI value 5000 with a resolution of 20 µm corresponds to a magnet distance of 100 mm from the flange.

**NOTICE** If necessary, the SSI sensors can be re-adjusted using the service tool described below.

**NOTICE**

**Observe during commissioning**

1. Before switching on for the first time, check the connection of the sensor carefully.
2. Position the magnet in the measuring range of the sensor during first commissioning and after replacement of the magnet.
3. Ensure that the sensor control system cannot be displaced in an uncontrolled way when switching on.
4. Ensure that the sensor is ready and in operation mode after switching on.
5. Check the pre-set span start and end values of the measuring range (Fig. 17) and correct them via the customer’s control system if necessary, or via the Temposonics service tool. The operation of the service tool is described in detail on the following pages.

5.2 Programming and configuration

**SSI interface**

The interface of Temposonics position sensors corresponds to SSI industry standard for absolute encoders. Its displacement value is encoded in a 24/25 bit binary or gray format and transmitted as a differential signal in SSI standard (RS 422).

**Fig. 22: Schematic connection**

**Fig. 23: Input wiring clock (+)/clock (−)**

The absolute, parallel position data is continually updated by the sensor and converted by the shift-register into a serial bit stream (Fig. 24).

**Fig. 24: Timing diagram**

Dependent on the baud rate chosen in the controller the following cable lengths are possible (Fig. 25):

<table>
<thead>
<tr>
<th>Cable length</th>
<th>&lt; 3 m</th>
<th>&lt; 50 m</th>
<th>&lt; 100 m</th>
<th>&lt; 200 m</th>
<th>&lt; 400 m</th>
</tr>
</thead>
<tbody>
<tr>
<td>Baud rate</td>
<td>1 MBd</td>
<td>&lt; 400 kBd</td>
<td>&lt; 300 kBd</td>
<td>&lt; 200 kBd</td>
<td>&lt; 100 kBd</td>
</tr>
</tbody>
</table>

**Fig. 25: Cable lengths and related baud rates**
Temposonics® position sensors can be adapted to modified measurement tasks very easily via the connecting leads – without opening the sensor. For this, the following Temposonics sensors programming tool is available (see page 16).

**NOTICE**

The programming tool is not approved for use in hazardous environments.

### Programming kit, part no. 254 590

The PC programmer is a hardware converter between sensor and serial PC interface. It can be used for adjusting sensor parameters via computer and the Temposonics programming software. The software for reading and adjusting the sensors requires a Windows computer with a free USB port. You can adjust the following parameters:
- Data length and data format
- Resolution and measuring direction
- Synchronous/asynchronous measurement
- Measurement filter (moving average of 2, 4 or 8 measurements)

### Step 1: Connect PC programmer

- Connect the PC programmer with the sensor via the corresponding adapter cable.
- Connect the PC programmer to a USB port of the computer.
- Connect the power supply via connector.

The outer contact of the connector is 0 V (ground), the inner contact is 24 VDC.

![Connect PC programmer](image)

### Step 2: Install software

Download the current software version from [www.temposonics.com](http://www.temposonics.com).

Install the software .NET Framework as administrator. Copy the program MTS_SSI_Serial_Configurator.exe to your computer and start it.

**System requirements:**
- Microsoft Windows 7 operating system or higher
- Microsoft .NET Framework from version 4.5.1 or higher

### Step 3: Start program

After starting the program MTS ET SSI Serial Configurator the software connects to the last selected COM Port and the user interface opens (Fig. 29). If the COM Port is not available an error message appears (Fig. 27).

![Error message COM Port is not available](image)

Select the right COM Port from the list (example see Fig. 28). The application will automatically restart and the user interface opens (Fig. 29).
Device Settings

The following parameters can be modified:

**SSI Settings (Fig. 29)**
- **Format:** Binary/Gray
- **Data Length:** 24 bits/25 bits
- **Resolution:** 5 µm/10 µm/20 µm/50 µm/100 µm
- **Mode:**
  - **Asynchron:** In asynchronous mode the sensor starts measuring and provides the position independent of the PLC.
  - **Synchron:** In synchronous mode the output of the Temposonics® SSI sensor is matched to the data request cycle of the controller.
- **Direction:**
  - **Forward:** Ascending position values from sensor electronics housing to rod end
  - **Reverse:** Ascending position values from rod end to sensor electronics housing
- **Filter:**
  - **No Filter/Filter Grad 2/Filter Grad 4/Filter Grad 8:** Moving average of 2, 4 or 8 measurements for noise reduction

**Error Settings (Fig. 30)**
- **Error Counter:** 1
- **Error Value:** 0

The **Error Counter** and **Error Value** settings determine, how often an error has to occur (Error Counter) so that a certain Error Value is shown. The standard settings for the **Error Counter** is “1” and for the **Error Value** it is “0”. So every error is shown with an error value of “0”. Both parameters are changeable.

---

**Sensor Information** contains the invariable sensor parameters, which were read in automatically when the sensor is connected (Fig. 29).

In the **Device Settings** menu the configurable parameters (SSI Settings, Error Settings) of the sensor can be set (Fig. 29).

The **Measurement** menu shows the current position of the magnet (Fig. 29).

The **Save** button saves any parameter changes you have made. After that the software restarts for the changes to take effect. The function **Measurement** will then be available again (Fig. 29).

The button **Disconnect** breaks the connection to the COM Port and closes the software (Fig. 29).

By clicking **Report** a report document is generated to provide sensor information (Fig. 29).

The **File** menu allows the following settings (Fig. 29):
1. **Open:** Uploads device settings from a XML file to the sensor. Click the **Save** button to complete the upload
2. **Save as:** Saves the current device settings as XML file
3. **Restore Factory Settings:** Restores and saves the sensor’s factory settings
4. **Close:** Closes the software application without saving any parameters
Measurement
After clicking the **Start Read** button the current position of the magnet is shown. Click the **Stop Read** button to stop the measurement (Fig. 31). The **View** button provides a graphic display of the magnet’s position (Fig. 32).

![Fig. 31: Display of current magnet position](image1)

![Fig. 32: Data display](image2)
6. Maintenance and troubleshooting

Fig. 33: Troubleshooting

6.2 Maintenance

The required inspections need to be performed by qualified personnel according to IEC 60079-17/TRBS 1203. These inspections should include at least a visual inspection of the housing, associated electrical equipment entrance points, retention hardware and equipment grounding. Inside the Ex-atmosphere the equipment has to be cleaned regularly. The user determines the intervals for checking according to the environmental conditions present at the place of operation. After maintenance and repair all protective devices removed for this purpose must be refitted.

In case of equipment faults, remove the equipment. The inner parts cannot be maintained by the customer. In this case send the equipment to the manufacturer for inspection.

**NOTICE**

It is not allowed to open the sensor.

<table>
<thead>
<tr>

Fig. 34: Schedule of inspection

Maintenance: Defines a combination of any actions carried out to retain an item in, or restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required functions.

Inspection: Defines an activity with the purpose to check a product carefully, aiming at a reliable statement on the condition of the product. The inspection is carried out without dismantling, or, if necessary, with partial dismantling, and supplemented by other measures, e.g. measurements.

Visual inspection: Optical inspection of product aims at the recognition of visible defects like missing bolts without using auxiliary equipment and tools.

6.3 Repair

Repairs on the sensor may be performed only by Temposonics or an explicitly authorized body.

6.4 List of spare parts

No spare parts are available for this sensor.

6.5 Transport and storage

The conditions of transport and storage of the sensor match the operating conditions mentioned in this document.

7. Removal from service/dismantling

The product contains electronic components and must be disposed of in accordance with the local regulations.

Safety declaration

Dear Customer,
If you return one or several sensors for checking or repair, we need you to sign a safety declaration. The purpose of this declaration is to ensure that the returned items do not contain residues of harmful substances and/or that people handling these items will not be in danger.

TempoSonics order number: ________________________  Sensor type(s): ________________________
Serial number(s): ________________________  Sensor length(s): ________________________

The sensor has been in contact with the following materials:

________________________________________________

Do not specify chemical formulas. Please include safety data sheets of the substances, if applicable.

In the event of suspected penetration of substances into the sensor, consult TempoSonics to determine measures to be taken before shipment.
