HIGH PRESSURE HOUSING (HPH)
Magnetostrictive Linear Position Sensors

- Precise position measurement in harsh environments
- Reliable solution for use in hazardous areas
- Easy sensor replacement
MEASURING TECHNOLOGY

The absolute, linear position sensors provided by Temposonics rely on the company’s proprietary magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and a supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the beginning of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

HIGH PRESSURE HOUSING (HPH)

This High Pressure Housing (HPH) is ATEX-IECEx as well as UL and cUL approved for use in hazardous areas with Temposonics® position sensors. The ATEX-IECEx, UL and cUL approvals cover flammable gases, vapors, liquids and dust.

This housing is made to fit Temposonics® R- and G-Series sensors and could be used with cable or connector versions.

Several design combinations are available to fit the application:
- M18 or ¾"UNF mounting flange
- M20 or ½" NPT cable gland thread
- Long or short housing, top or side mounted, as well as double side cable mounting

HPH ROTATION ADAPTER

This adapter allows you to adjust the position of the side opening when the HPH housing is mounted in a cylinder. The adaptor is pressure tested to 600 bar (8400 psi) peak.
- RTA-M18 with M30x1.5 mounting thread for standard M18 housing thread.
- RTA-¾" UNF with 1 1/16" UNF mounting thread for ¾" UNF housing thread.
- 253 961 with 1 ¼" UNF mounting thread for ¾" UNF housing thread.
