**SPECIFICATIONS**

**PARAMETER** | **SPECIFICATION**
--- | ---
Measured variable: | Displacement
Resolution: | Up to 0.002 mm (0.00008 in.)
Non-linearity: | < ± 0.01% of full stroke or ± 0.04 mm (0.0016 in.), whichever is greater*
Repeatability: | < ± 0.001% of full scale or ± 0.0025 mm (0.0001 in.), whichever is greater
Hysteresis (magnetic**): | < 0.004 mm (0.00016 in.)
Output format: | 24 or 25-bit binary or gray code
Measuring range: | Profile-style sensors (RP): 25 to 5000 mm (1 to 196 in.)
 | Rod-style sensors (RH): 25 to 7620 mm (1 to 300 in.)
Operating voltage: | +24 Vdc (+ 20%, - 15%)
Power consumption: | 100 mA (typical)
Operating temperature: | Head Electronics: - 40 to 75 °C (- 40 to 167 °F)
 | Sensing Element: - 40 to 105 °C (- 40 to 221 °F)
EMC test: | DIN IEC 801-4, Type 4, CE certified;
 | DIN EN 50081-1 (Emissions), DIN EN 50082-2 (Immunity)
Shock rating: | 100 g (single hit)/IEC standard 68-2-27 survivability
Vibration Ritting: | 5 g/10-150 Hz/IEC standard 68-2-6

**PROFILE STYLE (Model RP)**
- Electronic head: Aluminum die-cast housing
- Sensor stroke: Aluminum profile
- Sealing: IP65
- Mounting: Adjustable mounting feet or T-slot M5 nut in base channel
- Magnet type: Captive-sliding magnet or floating magnet

**ROD STYLE (Model RH)**
- Electronic head: Aluminum die-cast housing
- Sensor rod: 304L stainless steel
- Operating pressure: 350 bar static, 690 bar spike (5000 psi static; 10,000 psi spike)
- Mounting: Threaded flange M18 x 1.5 or 3/4-16 UNF-3A
- Typical mounting torque: 45 N-m (33 ft.-lbs.)
- Magnet type: Ring or floating magnet

All specifications are subject to change. Please contact MTS for specifications critical to your needs.

---

**OUTPUT**

**Synchronous Serial Interface (SSI)**
SSI is a widely used serial interface between an absolute position sensor and a controller. SSI uses a clock pulse train from a controller to gate out sensor data: one bit of position data is transmitted to the controller per one clock pulse received by the sensor. The absolute position data is continually updated by the sensor and converted by the shift register into serial information. Between each clock pulse train there is a minimum dwell of 25 µs during which data is moved into the register. The data is then shifted out when the sensor receives a pulse train from the controller. When the Least Significant Bit (LSB) goes HIGH and the minimum dwell time has elapsed, new data is available to read. Refer to the SSI Timing Diagram and Sequential Measurements of SSI Timing illustration for more information.

Position data from the sensor is encoded in a 24 or 25-bit binary or gray code format and transmitted at very high speed. Update frequencies are available up to 7500 measurements per second (length dependent) in asynchronous mode; and 1000 measurements per second in synchronous mode (up to 82 inches).

Product specification is part no. 550542.

---

**SSI Timing Diagram**

**For Example:** For 25-bit output, the timing clock must have 26 pulses.

**Sequential Measurements of SSI Timing**

**Baud Rates for Data Transmission**

**DEFINITIONS:**
- **Synchronous mode:** A SSI takes measurements at its fastest internal interrogation rate (length dependent) and provides information upon request.
- **Asynchronous mode:** Asynchronous mode: SSI takes measurements at its fastest internal interrogation rate (length dependent) and provides information upon request.

**NOTE:**
If the controller/interfacc does not specify synchronous mode, use the sensor in asynchronous mode.
ROD-STYLE (Model RH)
The Temposonics R Series rod-style application housing (Model RH) offers modular construction, flexible mounting configurations, and easy installation. It is designed for internal mounting in applications where high-pressure conditions exist (5000 psi continuous, 10,000 psi spike) such as hydraulic cylinders. Temposonics RH may also be mounted externally in many applications.

In addition, the RH housing offers the ability to quickly and easily replace the sensor cartridge in the field (up to 72 inches).

CYLINDER INSTALLATION
The rod-style Temposonics R Series position sensor (Model RH) is designed for installation into hydraulic cylinders. The sensor’s high-pressure, stainless steel tube installs into a 1/2 inch bore in the piston head and rod assembly as shown.

NOTES:
• The position magnet requires minimum distances away from ferrous metals to allow proper sensor output. The minimum distance from the front of the magnet to the cylinder end cap is 15 mm, (0.6 in.). The minimum distance from the back of the magnet to the piston head is provided by the non-ferrous spacer, i.e. 3.2 mm, (0.125 in.).
• The illustration above represents a typical installation. Some installation requirements may be application specific.
PROFILE-STYLE (Model RP)
The Temposonics RP profile-style position sensor offers modular construction, flexible mounting configurations, and easy installation. A choice of two magnet mounting configurations are available with the profile housing: captive sliding magnet or floating magnet.

Captive Sliding Magnet

Floating Magnet

NOTE:
Temposonics RP sensors include two mounting feet (Part no. 400802) for sensors up to 1250 mm (50 in.). One additional mounting foot is included for every additional 500 mm (20 in.).

NOTE:
Cable and mating connector dimensions same as shown on page 2.

### CYLINDER PORT DETAILS

#### PORT DETAIL FOR TEMPOSONICS Model RH SENSORS WITH HOUSING

**NOTES:**
2. MTS has extracted all pertinent information from MS33649 to generate this document.
3. PD must be square with surface B within 0.005 FIM across 2.250 dia. minimum.
4. PD must be concentric with 2.250 dia. within 0.030 FIM and with 0.769 dia. within 0.005 FIM.
5. Surface texture ANSI B46.1-1978
6. Use O-ring MTS part number 560315 for correct sealing.
7. The thread design shall have sufficient threads to meet strength requirements of material used.
8. Finish counter-bore shall be free from longitudinal and spiral tool marks. Annular tool marks up to 32 microinches maximum will be permissible.

![Diagram of Cylinder Port Details](image)

#### PORT DETAIL (SAE J1926/1) FOR TEMPOSONICS Model RH SENSORS WITH HOUSING

**NOTES:**
1. If face of port is on a machined surface, dimensions 1.180 and 0.094 need not apply as long as R0.008/0.004 is maintained to avoid damage to the O-Ring during installation.
2. Measure perpendicularity to A at this diameter.
3. This dimension applies when tap drill cannot pass through entire boss.
4. This dimension does not conform to SAE J1926/1.
Magnets must be ordered separately with Temposonics RH sensors. The standard ring magnet (Part no. 201542) is suitable for most applications.

Magnets are included with the order of Temposonics RP sensors. Temposonics RP can be configured with one of two magnet configurations: captive sliding magnet or floating magnet.
HOW TO ORDER

When placing an order, build the desired model number using the model number guide (right). A wide range of Temposonics R Series Sensor configurations are available to meet the demands of your particular application. For detailed information about how to order extension cables and accessories, see the bottom section of this page and page 8.

If you have any questions about how to apply MTS Temposonics R Series position sensors, please contact one of our Application Engineers or your local MTS distributor—they are available to help you design an effective position sensing system to fit your application.

SENSOR CONNECTION TYPE
H = US customary threads, flat-faced hex
T = US customary threads, raised-face hex
M = Metric threads, flat-faced hex
N = Metric threads, raised-face hex
S = US customary threads, raised-face hex, and pressure tube
T = US customary threads, flat-faced hex, and pressure tube
M = Metric threads, flat-faced hex, and pressure tube
N = Metric threads, raised-face hex, and pressure tube
B = Sensor cartridge only (No application housing, stroke lengths ≤ 72 in.)

STROKE LENGTH
U __ __ __ . __ = Inches and tenths (Encode in 0.1 in. increments)
or
M __ __ __ __ = Millimeters (Encode in 5 mm increments)

NOTE:
RH spare pressure housing for stroke lengths 1 to 72 in. (25 to 1825 mm) only.

PRESSURE HOUSING (RH Spare Only)

SENSOR MODELS
RH = Hydraulic Rod Style
RP = Profile Style

HOUSING STYLE
Temposonics RH only (magnet must be ordered separately):
T = US customary threads, raised-faced hex, and pressure tube
S = US customary threads, flat-faced hex, and pressure tube
M = Metric threads, flat-faced hex, and pressure tube
N = Metric threads, raised-faced hex, and pressure tube
B = Sensor cartridge only (No application housing, stroke lengths ≤ 72 in.)

Temposonics RP only (magnet included):
M = Floating magnet (Open ring) (Part no. 251416)
S = Captive-sliding magnet with joint at top (Part no. 252182)
V = Captive-sliding magnet with joint at front (Part no. 252184)

STROKE LENGTH
U __ __ __ . __ = Inches and tenths (Encode in 0.1 in. increments)
or
M __ __ __ __ = Millimeters (Encode in 5 mm increments)

CONNECTION TYPE/CONNECTOR OR CABLE
Connector
D70 = 7-pin DIN, integral, standard
RG0 = 7-pin micro, integral, (for replacement orders only)

Integral Cable
E __ __ = Integral standard cable with pigtail termination
P __ __ = Integral high-performance cable with pigtail termination
F __ __ = Integral cable, polyurethane jacket with pigtail termination

INPUT VOLTAGE
1 = +24 Vdc (+20%, -15%)

OUTPUT
S __ __ __ __ __ __ = SSI Output (Fill in the six blanks with the applicable codes). Consult factory for additional options.
