Quote and Contract Terms & Conditions:
The parties expressly agree that the purchase and use of Material and/or Services from MTS Sensors Division are subject to MTS’ Terms and Conditions, in effect as of the date of this document, which are located at http://www.mtssensors.com and are incorporated by reference into this and any ensuing contract. Printed Terms and Conditions can be provided upon request by emailing info.us@mtssensors.com or if you prefer, go to http://www.mtssensors.com and click the Quote/Contract Terms and Conditions link at the bottom of the page to download the PDF.
Model MC420 Operation and Installation Manual

Reference Information

Notices used in this manual

This manual contains notices to highlight specific information as follows:

Notes:
These notices provide important tips, guidance, or advice.

Important:
These notices provide information that might help you avoid inconvenient or problem situations.

Attention:
These notices indicate possible damage to programs, devices, or data and is placed just before the instruction or situation in which damage could occur.

Caution:
These notices indicate situations that can be potentially hazardous to you. A Caution notice is placed just before a description of a potentially hazardous procedure, step, or situation.

Related publications

The following publications are listed below by part number followed by description and are available in Adobe Acrobat Portable Document Format (PDF) at http://www.mtssensors.com/

550752 - Product Specification, Model MC420 Analog Transmitter
551103 - Level Plus Accessories Catalog

For information about safe work procedures, refer to the following documentation:
National Electric Code ANSI/NFPA 70
CSA C22.1 Canadian Electrical Code

How this manual is organized

“Introduction”, provides an overview of the manual.
“Terms and Definitions”, provides definitions of terms used in this manual.
“Product Overview”, gives an overall product description for the Level Plus liquid-level transmitter, its specifications, use, output, and electronics.
“Installation and Mounting”, provides detailed installation and mounting information.
“Electrical Connections and Wiring Procedures”, provides engineering specifications and wiring diagrams to assist in the installation process.
“Maintenance and Field Service”, provides guidelines for general maintenance.
“Troubleshooting”, provides a list of symptoms, their possible cause and the action to be taken when troubleshooting the transmitter.

Setup using magnet - provides procedures for setting 4 and 20 mA set points using supplied magnet.
Setup using HART® Field Communicator - provides procedures for setting 4 and 20 mA set points
Setup using MTS Field Setup Software - provides software installation, parameter setup, and calibration procedures.

“Agency Information” provides comprehensive listings of agency approvals and standards, installation drawings, labels and applicable protocols.

Getting information, help, and service

**Level Plus® Liquid-Level Sensors - M-Series Model MC420 Analog Transmitter, Operation and Installation Manual, Part No.: 550760 Revision E (EN) 02/2016**
Introduction

MTS is recognized as the pioneer, innovator and leader in magnetostrictive sensing. The new Level Plus® M-Series transmitter design represents a continuation of our on-going effort to provide effective, innovative and reliable products to the Liquid Level marketplace.

This manual will provide the following information about the Level Plus Model MC420 analog transmitter:

- Terms and definitions
- Product overview
- Installation and mounting
- Electrical connections
- Maintenance and field service
- Troubleshooting
- Quick start-up guide
- Setup using the supplied magnet
- Setup using a HART® Field Communicator
- Setup using MTS Field Setup Software
- Agency information
- Product certifications

Public website support portal

Visit our support portal at http://www.mtssensors.com for:

- Building Level Plus M-Series Model MC420 analog transmitter model numbers
- Latest documentation releases
- Detailed ordering information
- Latest software updates
Terms and definitions reference

H

HART® – a Bidirectional communication protocol that provides data access between intelligent field instruments and host systems.

I

Interface – Noun; The measurement of the level of one liquid when that liquid is below another liquid.

Interface – Adj.; The Software Graphical User Interface (GUI) that allows the user to access software protocols (HART).

Intrinsic safety – ‘Intrinsically safe’ - Type of protection based on the restriction of electrical energy within apparatus of interconnecting wiring exposed to potentially explosive atmosphere to a level below that which can cause ignition by either sparking or heating effects.

N

NEMA Type 4X – A product Enclosure intended for indoor or outdoor use primarily to provide a degree of protection against corrosion, windblown dust and rain, splashing water, and hose-directed water; and to be undamaged by the formation of ice on the enclosure. They are not intended to provide protection against conditions such as internal condensation or internal icing.

NPT – U.S. standard defining tapered pipe threads used to join pipes and fittings.

S

Specific Gravity – The density ratio of a liquid to the density of water at the same conditions.
**Product Overview**

The Level Plus Model MC420 Liquid-Level transmitter is a continuous multi-functional magnetostrictive transmitter that provides product level or interface level to the user via 4 to 20 mA current loop or HART. Magnetostrictive technology is one of the most accurate and repeatable level technologies available to date. MTS is the inventor and purveyor of magnetostrictive technology and has been serving the level industry for over 30 years.

### INDUSTRIES
- Petrochemical
- Chemical
- Water and Wastewater
- Mining

### APPLICATIONS
- General Process
- Industrial Chemicals
- Solvents
- Detergents and Soaps
- Lubricating Oils

### FEATURES
- 4 to 20 mA Output with HART®
- Single Channel Output
- Level Measurements
  - Product
  - Interface
- No Scheduled Maintenance or Recalibration
- High Accuracy and Repeatability
- Intrinsically Safe (I.S.)

**Components**

The Level Plus Model MC420 liquid level transmitter consists of four main components; a housing, outer pipe, float, and electronics.

**HOUSING**

Level Plus Model MC420 transmitters comes standard with a NEMA Type 4X 316L stainless steel housing as shown below:

![NEMA Type 4X 316L stainless-steel housing](image)
OUTER PIPE CONFIGURATION

The outer pipe is constructed of 316L (1.4404) stainless steel.

Figure 1. 5/8 in. diameter rigid outer pipe of 316L stainless steel

FLOATS

The Model MC420 comes standard with the float 251981-1 for FM and CSA approvals and float 251981-2 for ATEX approvals. Alternative floats can be ordered for other applications including detecting an interface level. When ordering alternative floats a stop collar is also required, MTS part number 560369-1. To be able to accurately detect the interface level there needs to be a difference of at least 0.05 in specific gravities between the product and interface liquids. For detailed information about floats, refer to the ‘Accessories Catalog’, MTS part number 551103.

For assistance with selecting a specific float for your application, please contact Technical Support with the following information:

• Specific gravity of liquid(s) being measured
• Process temperature
• Vessel pressure

INTERNAL ELECTRONICS

The electronics of the model MC420 are sealed and are not repairable. The electronics consist of a sensing element and a board set. The board set contains two reed switches that allow for setting the 4 and 20 mA set points by using a supplied magnet and moving the float.

ACCESSORIES

MTS also offers a series of displays, housings, converters, and other accessories, please refer to the ‘Accessories Catalog’, MTS part number 551103.
Theory of operation

Magnetostrictive M-Series transmitters precisely sense the position of an external float by applying an interrogation pulse to a waveguide medium. This current pulse causes a magnetic field to instantly surround the waveguide. The magnet installed within the float also creates a magnetic field. Where the magnetic fields from the waveguide and float intersect, a rotational force is created (waveguide twist). This, in turn, creates a torsional-sonic pulse that travels along the waveguide as shown in Figure 2.

The head of the transmitter houses the sensing circuit, which detects the torsional-sonic pulse and converts it to an electrical pulse. The distance from a reference point to the float is determined by measuring the time interval between the initiating current pulse and the return pulse and precisely knowing the speed of these pulses. The time interval is converted into a level measurement.

Figure 2. Theory of operation

Accuracy

For magnetostrictive transmitters inherent accuracy is measured in terms of non-linearity. Non-linearity is a measurement of any imperfections in the waveguide that are reflected in the linearity of the transmitter’s output. MTS tolerances reflect a maximum non-linearity of 0.02% of full scale. MTS is able to achieve such strict tolerances by manufacturing all of its own waveguide from a proprietary alloy and testing 100% of all transmitters before shipping.

Warranty

All M-Series transmitters come with a two year limited warranty from the factory shipment date. A Return Materials Authorization (RMA) number is required and must accompany any transmitter returns. Any unit that was used in a process must be properly cleaned in accordance with OSHA standards, before it is returned to the factory. A Material Safety Data Sheet (MSDS) must also accompany the transmitter that was used in any process.

Important:

Contact Technical Support or Customer Service for assistance if you suspect that the transmitter is not working correctly. Technical support can assist you with troubleshooting, part replacement, and Returned Material Authorization (RMA) information if required.
# Model number identification

**TRANSMITTER MODEL**

M-Series Model MC420 liquid-level transmitter

Comes with one standard product level float (*part number 251981-X, see Standard float section below*).

</tr>
</tbody>
</table>

#### ELECTRONICS

| Input voltage: | 10.5 to 36 Vdc maximum |
| Fail safe: | High (21.4 mA), Low (3.8 mA) |
| Reverse polarity protection: | Series diode |
| Lightning/Transient protection: | Stage 1: Line-to-ground surge suppression; IEC 61000-4-5 |
| | Stage 2: Line-to-line and line-to-ground transient suppressors; IEC 61000-4-4 |

#### CALIBRATION

| Zero adjust range: | Anywhere within the active length |
| Span adjust range: | Full scale to 152 mm (6 in.) from zero |

---

### ENVIRONMENTAL

- **Enclosure rating:** NEMA Type 4X
- **Humidity:** 0 to 100% relative humidity, noncondensing
- **Operating temperatures:**
  - Electronics*: -34 °C (-30 °F) to 71 °C (160 °F)
  - Sensing element: -40 °C (-40 °F) to 125 °C (257 °F)◊
  - Contact factory for specific temperature ranges.

### FIELD INSTALLATION

- **Housing dimensions:** NEMA Type 4X: 81 mm (3.2 in.) by 123 mm (4.85 in.) O.D.
- **Mounting:** Rigid pipe: ¾ in. Adjustable MNPT fitting
- **Wiring:** Integral cable: 4.5 m (15 ft.) 2-wire integral cable, shielded
- **Electrical Connections:** NEMA Type 4X: ½ in. FNPT conduit opening
Installation and mounting

This section contains information about storing your transmitter (prior to installation) and detailed procedures for installing and mounting your transmitter.

Storage

If storage is required prior to installation, store indoors in a dry environment at ambient temperature range not exceeding -40 °C (-40 °F) to 71 °C (160 °F).

Stilling wells and guide poles

Level Plus transmitters can be mounted in slotted or unslotted stilling wells but a slotted stilling well is always preferred. Using an unslotted stilling well will negatively affect performance of any level device as the level in the stilling well can differ from the level in the tank. The Level Plus transmitter can also be installed to one side of the stilling well to also allow for sampling and manual gauging from the same opening as the automatic tank gauging. Contact Technical Support for details.

Level Plus transmitters do not require a stilling well for installation. Our transmitters are installed in numerous tanks without stilling wells with no loss in performance. A stilling well is highly recommended for agitated, turbulent, and/or fast filling tanks.

Installation

The installation procedures below are illustrated using the adjustable NPT fitting for a threaded flange mount.

RIGID PROBE

Tools Required:

- Channel lock pliers
- Common screwdriver

Caution:

It is recommended that assembly and mounting of this transmitter should not be performed alone. To ensure proper and safe assembly of the M-Series transmitter, a minimum of two (2) individuals are recommended. Gloves are also recommended. In addition, PPE is required for work areas such as safety shoes, safety glasses, hard hat, and fire resistant clothing.

Perform the following steps to Install the Model MC420 transmitter:

1. Remove the float sleeve and E-ring. With assistance, feed the rigid pipe through the hole of the removed tank flange until the flange is positioned near the top of the transmitter. Insert the threaded portion of the adjustable fitting into the customer supplied flange and tighten (apply pipe thread sealant if required). Be careful not to drop the flange as it can damage the transmitter.

2. Slide the float onto the rigid pipe. Install float sleeve and E-ring. Do not drop the float or allow it to free fall along the rigid pipe as damage may result.

Note:

The stop collar can be removed or adjusted based on the float selected for the application. Please consult the factory for more information.

3. Slide float back down to the float sleeve to prevent it from free falling during installation into the tank. Insert the rigid pipe (with float) through the tank opening and lower the transmitter/float assembly into the tank until it rests on the bottom. DO NOT DROP OR DAMAGE THE PIPE.

4. Secure the flange onto the tank mount.

5. Pull the transmitter upward so the end plug is just resting on the floor of the tank. Tighten the adjustable fitting to hold the transmitter in place.

6. Terminate the field wire cables noting proper wire orientation.
Mounting

The method of mounting the transmitter is dependent on the vessel or tank in which it is being used.

**THREADED FLANGE MOUNTING**

In most applications, the Model MC420 transmitter can be mounted directly to the tank or flange via a NPT threaded fitting, assuming there is a proper threaded connection available. If the float will not fit through the flange opening when the flange is removed, there must be some alternative means to mount the float on the transmitter from inside the vessel; this may require an access port nearby the entry point of the transmitter as shown in *Figure 3.*

![Threaded flange mounting for rigid and flexible pipe](image)

*Figure 3.* Threaded flange mounting for rigid and flexible pipe
Electrical connections and wiring procedures

A typical intrinsically safe connection for the Level Plus Model MC420 transmitter includes protective safety barriers, a power supply and a reading or monitoring device. Refer to Agency information for detailed information.

Safety recommendations for installation

Be sure to:

1. Always follow applicable local and national electrical codes and observe polarity when making electrical connections.
2. Never make electrical connections to the M-Series transmitter with power turned on.
3. Make sure that no wire strands are loose or sticking out of the terminal block connection which could short and cause a problem.
4. Make sure that no wire strands, including shield, are in contact with the electronic module enclosure.
5. The electronics module enclosure is grounded through internal circuitry and is electronically isolated from the explosion-proof housing.

Refer to the safe operating power chart (see Figure 4), which shows the relationship between loop resistance and operating voltage.

![Figure 4. Safe operating power chart](image-url)
**Recommended cable types**

Refer to ‘Table 1’ below for general requirements of cable types for the Level Plus Model MC420 analog transmitter.

### CABLE SPECIFICATIONS

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum cable size</td>
<td>24 AWG or heavier (0.51 mm diameter) Contact factory for assistance selecting proper cable.</td>
</tr>
<tr>
<td>Cable type</td>
<td>Single pair shielded or multiple pair with overall shield</td>
</tr>
<tr>
<td>Maximum cable length</td>
<td>Twisted pair: 10,000 ft. (3,048 m) Multiple twisted pair: 5,000 ft. (1,524 m)</td>
</tr>
</tbody>
</table>
| Maximum cable length formula | Use the following formula to determine the maximum cable length for a specific application:  
                                 Where: 
                                 
                                 \[
                                 L = \left(\frac{65 \times 10^6}{R \times C}\right) - \left(\frac{Cf + 10,000}{C}\right)
                                 \]
                                 \n                                 \[L = \text{Length in meters or feet}\]
                                 \[R = \text{Resistance in ohms, current sense resistance plus barrier resistance}\]
                                 \[C = \text{Cable capacitance in pF/ft, or pF/m}\]
                                 \[Cf = \text{Maximum shunt capacitance of smart field devices in pF}\]

Example:
Assume a high performing smart transmitter, a control system, and a single pair of shielded wires.
- \(R = 250\) ohms
- \(C = 50\) pF/0.3 m (ft)
- \(Cf = 5,000\) pF

\[
L = \left(\frac{65 \times 10^6}{250 \times 50}\right) - \left(\frac{5,000 + 10,000}{50}\right)
\]

\[
L = 1,494\text{ m (4,900 ft.)}
\]

Table 1. Cable specification and parameters
Grounding

**Note:**
Grounding the transmitter through a threaded conduit connection does not provide sufficient ground.

The earth ground for the internal electronics is connected to the housing and the drain wire of the integral cable. The drain wire should be connected to an earth ground for maximum surge protection.

**Safety barriers for IS installation**

Refer to Table 2 for entity parameters and Figure 5 for passive and active safety barrier types for Model MC420 transmitter installations.

Maintenance and Field Service

This section contains information about post installation maintenance and provides an overview of MTS Sensors’ repair and replacement procedures.

General maintenance and field service requirements

<table>
<thead>
<tr>
<th>Notes:</th>
</tr>
</thead>
<tbody>
<tr>
<td>Please contact Technical Support or Customer Service for help when damage occurs in order to obtain a return materials authorization (RMA) number. Packages without a RMA number may be rejected. Any unit that was used in a process must be properly cleaned in accordance with OSHA standards, before it is returned to the factory. A Material Safety Data Sheet (MSDS) must accompany material that was used in any media.</td>
</tr>
</tbody>
</table>

FLOAT MAINTENANCE

Level Plus M-Series transmitters use magnetostrictive technology and only have one moving part—the float. This technology ensures no scheduled maintenance or recalibration is required. However, MTS recommends that you check the transmitter pipe annually for build up of process material. Floats should move freely along the pipe. If they do not, routine cleaning should be performed.

FIELD SERVICE

The Model MC420 transmitter is not repairable. Troubleshooting may be performed but if there is any damage to the MC420 transmitter a new one must be ordered.

SERVICE / RMA POLICY

If the customer suspects their transmitter is damaged or not functioning correctly, call MTS Technical Support for further instruction. If it is necessary to return the transmitter to the factory, an RMA number is required and can only be issued by Technical Support. Product returns that do not include an RMA will be returned to the customer. MTS evaluates the transmitter and advises the customer whether a repair or replacement is necessary and any cost that might be incurred. If the customer declines repair/replacement or the transmitter has no fault found, the unit is sent back as is and the customer is charged with a standard evaluation fee.

If the transmitter is under warranty and a manufacturer’s defect is detected, there will be no cost to the customer for repair or replacement. If the transmitter is out of warranty or if the customer has damaged the transmitter, a repair or replacement quote will be provided. In specific cases where the transmitter can not be removed and returned to the factory for evaluation, field evaluations can be performed in the field by an MTS technician. If field evaluation must be performed, the customer is responsible for all expenses incurred for travel, evaluation, parts and repair time. However, if the transmitter is under warranty and the problem is due to a manufacturer’s defect, there is no cost to the customer for replacement parts. To discuss all service options, contact Technical Support.

Troubleshooting

The table below contains troubleshooting information for the Model MC420 analog transmitter.

TROUBLESHOOTING PROCEDURES

<table>
<thead>
<tr>
<th>Symptom</th>

<td></td>
<td>Float is in the dead zone</td>
<td>Raise float to see if the error stops</td>
</tr>
</tbody>
</table>

Table 3. Troubleshooting reference
Quick set-up procedure

Note:
Output will vary depending on the location of the 4 and 20 mA set points.

Tools Needed:
- 24 Vdc linear regulated power supply
- Current Meter

QUICK START-UP PROCEDURE
1. Connect 24 Vdc power supply
2. Turn on power supply
3. Connect Current Meter to loop.
4. Move the float to the tip of the pipe and verify 4 mA output
5. Move the float to the top of the pipe and verify 20 mA output
6. Turn off power and disconnect power supply
7. Install in tank
8. Connect power and turn on

Setup using supplied magnet

Note:
To ensure that the new settings are correct, place a current meter in line with the MC420 so that is is visible during the calibration process.

The Model MC420 transmitter comes calibrated from the factory with standard 4 mA setpoint equal to 76 mm (3 in.) and 20 mA setpoint equal to order length minus 127 mm (5 in.). To change the Zero (4 mA) or Span (20 mA) settings, use the following procedure.

To set the Zero (4 mA) setpoint
1. Place float in desired position for the zero (4 mA) point.
2. Locate the recess marked (Z) on the underside of the baseplate.
3. Using the MTS provided magnet briefly tap the (Z) to enable calibration.
4. Place the magnet in the recess marked (Z) and hold for 3 seconds, then release.

To set the Span (20 mA) setpoint
1. Move the float to the desired span (20 mA) location.
2. Locate the recess marked (S) on the underside of the base plate.
3. Using the MTS provided magnet, briefly tap the recess marked (S) to enable calibration.
4. Place the magnet in the recess marked (S) for 3 seconds, then release.
Setup using HART Field Communicator

Refer to the documentation that comes with the Rosemount Model 275 and 375 Field Communicator for specific sensor calibration information. This section describes how the HART protocol is applied to the Level Plus Model MC420 transmitter only.

Using the HART interface allows for calibration without having to remove the transmitter from the process and position the floats. You can perform this function by using HART commands 35 and 65.

Calibration set points for level are given as the absolute displacement (in the appropriate units) from the tip of the sensor pipe. For example, if the Zero (LRV) position for level 1 is given as 5 inches, the transmitter will produce 4 mA when the float is 5 inches from the tip of the sensor pipe. If the Span (URV) position for level 1 is given as 30 inches, the transmitter will produce 20 mA when the float is 35 inches from the top of the sensor pipe. To calibrate the temperature set points, the Zero (LRV) and Span (URV) points are given in degrees. For temperature, the Zero (LRV) value (in degrees) must always be less than the Span (URV) value (in degrees).

PREPARING THE TRANSMITTER FOR RE-CALIBRATION

The Model MC420 transmitter can be re-calibrated by using the model 275 and 375 Field Communicator. Complete the following procedure to reset the zero and span values for loop 1 (only loop 1 can be calibrated with the HART Field Communicator using the generic XMTR type driver). To access both loops as well as other parameters, the MTS device driver must be purchased and installed into the 275/375 field communicator. For more information about the HART device driver, go to HARTcomm.org.

Attention:
DO NOT enter a high value that exceeds the active length of the sensor.

Before you begin, perform the following steps:

1. Connect the transmitter to a clean 24 Vdc power supply. Use a linear supply, switching types do not provide ripple-free power. HART cannot tolerate more than a 25 mV voltage ripple.
2. If the unit is installed in a live application, place your automatic controllers in manual mode and be advised that the output current will change during calibration.
3. Follow safe working procedures for working on live equipment in a hazardous location before you remove the housing cover.
4. Connect the HART Field Communicator to the loop.
5. Press the black and white I/O button on the HART terminal. The HART terminal will perform an automatic self test. The Main window displays. If the device is not connected properly, the message “No device found” displays.
6. In the Main window, press the Key #1, the Device Setup window displays.
7. In the Device setup window, press Key #3. The Basic Setup window displays.
8. In the Basic Setup window, press Key #3. The Range Values window displays.

SETTING THE LOW VALUE

Complete the following steps to set the low value:

1. To set the low value, Process Variable, Low Range Value (PV LRV) to 4 mA, select Key #1. The PV LRV window displays the current low value. Below the highlighted value located under the current value, key in the low value you want (example 3.00 in. is shown; if 4 inches is the value you want, key in 4.) then, press Enter (F4) located below the LCD display.
2. To write the changed lower value to memory, press the Send key.
3. Two Warning messages will display before the new values take affect; if your new low values are correct, respond to the Warning messages by pressing OK when prompted. This action resets the Low Range Value, or 4 mA position into the transmitter’s memory.
4. Go back to the Range Values window to verify that the new parameters have been accepted into the transmitter’s memory.
5. Do one of the following:
5a. Exit program mode.
5b. To reset the upper value, continue with “Setting the Upper Range Value.”

**SETTING THE UPPER RANGE VALUE**

**Caution:**

DO NOT enter a high value that exceeds the active length of the sensor.

Complete the following steps to set the Upper Range Value:

1. Open the Range Values window. To set the 20 mA Upper Range Value, press Key #2. The Process Variable, Upper Range Value (PV URV) window displays.
2. As shown the Lower Value window, the current value displays with a highlighted number below the value displayed. To change the upper value, key in the new value. You can use whole numbers or whole numbers and decimals (example, 40 = 40 inches, or 40.5 = 40.50 inches.) Whole numbers will be converted as decimal equivalents automatically by the HART terminal.
3. Key in the new Upper Range Value and press Enter or (F4). The Range Values window displays.
4. Verify that the upper and lower values are correct. If the values are correct, press Send.
5. You will be prompted with two Warning messages, press OK in response to both warnings.

**Setup using MTS Field Setup software**

Adjustments to the calibration and setup parameters of the transmitter may be done using the MTS Field Setup Software and a RS232 to HART converter (SMAR HI-311, MTS Part # 380068). Be sure to install the latest software package, go to www.mtssensors.com for more information.

**USING THE MTS FIELD SETUP SOFTWARE**

**Tools Required:**

- HART adapter/converter
- 24 Vdc power supply
- PC

Complete the following steps to Install Setup Software

1. Insert the software installation CD into computer or go to www.mtssensors.com and download the latest software.
2. Open folder “Setup software Analog_Digital”
3. Open folder “Analog”
4. Open file “M-Series Field Setup”
5. Follow on screen instructions

Complete the following steps to Install the hardware

1. Connect Power Supply to level transmitter
2. Connect HART adapter to level transmitter and PC
Attention:

Be sure loop #1 is connected to a load of 250 to 500 ohm. A transmitter installed in a control loop is a good example of the loop load. A 250 ohm load resistor may need to be added to the loop for HART to communicate effectively.

3. Turn on power
4. Open Setup Software. Data should fill in. If no data appears select a different serial communication port.

ADVANCED SETUP TAB

Note:

Not all parameters are available on the MC420 including display units, float #2, temperature and display.

Gradient: A calibration factor that is specific to each level transmitter. This value should not be changed unless directed to do so by Technical Support.

Length: The order length of the transmitter. This value should not be changed unless directed to do so by Technical Support.

Units: The unit of measure for Length and Head Adder. This is used when writing new values of Length and Head Adder to the transmitter. Use the Output Tab to change units of measure for all data.

Head Adder: The distance between the sensing element and the order length. Each model has a slightly different head adder. This value should not be changed unless directed to do so by Technical Support.

Transmitter style

<table>
<thead>
<tr>
<th>Length</th>
</tr>
</thead>
<tbody>
<tr>
<td>NEMA 4X housing, standard rigid pipe</td>
</tr>
</tbody>
</table>

Alarm: The output state that the level transmitter enters upon failure. Alarm can be Low (3.8 mA) or High (21.5 mA).

CALIBRATION TAB

Note:

Not all parameters are available on the MC420 including level #2, temperature and offset.
1. Changing the 4 and 20 mA set points occurs on the Calibration Tab. The procedure is the same for Level 1, Level 2 and Temperature.
2. Click ‘Read’ to determine current set point and units.
3. Select units from drop down menu.
4. Change set point. The 4 mA set point is the Zero or Lower Range Value (LRV). The 20 mA set point is the Span or Upper Range Value (URV).
5. Click ‘Write.’ Click ‘Read’ and confirm the new set points are correct.

**OUTPUT TAB**

---

**Note:**

Not all parameters are available on the MC420 including output mapping and temperature units.

---

**Output Units:** The units of measure for level and temperature may be selected using the pull down menus. When changing units, these selections should be changed on this screen first, prior to changing units on any of the other tabs (Advance Setup or Calibration).

**Read:** This button sends a single read command to the transmitter and displays the data which the transmitter responds with.

INSTALLATION DRAWING NOTES (FIGURE 6)

NOTES:

1. FOR I.S. FIELD INSTALLATION WIRING SHALL BE INSTALLED IN ACCORDANCE WITH THE COUNTRY IN USE (eg CANADIAN ELECTRICAL CODE, PART 1, NATIONAL ELECTRIC CODE ANSI/NFPA 70 ARTICLE 504-30.)

2. SHIELDED TWISTED CABLE OF 24 AWG OR HEAVIER SHOULD BE USED. CABLE CAPACITANCE SHALL BE LESS THAN 30 PF PER FOOT.

3. CONTROL ROOM EQUIPMENT SHOULD NOT USE OR GENERATE MORE THAN 250 V RMS.

4. BARRIERS MUST BE HAZARDOUS AREA APPROVED.

5. THE CONNECTION BETWEEN THE EARTH GROUND TERMINAL OF THE ENTITY APPROVED SAFETY BARRIERS AND SYSTEM EARTH GROUND MUST BE LESS THAN 1 ohm.

6. SAFETY BARRIERS ARE ENTITY APPROVED SAFETY BARRIERS USED IN AN APPROVED CONFIGURATION WHERE TRANSMITTER Vmax IS GREATER THAN BARRIER Voc AND TRANSMITTER Imax IS GREATER THAN BARRIER Isc.

7. TRANSMITTER Ci PLUS TOTAL CABLE CAPACITANCE FOR EACH LOOP MUST NOT EXCEED BARRIER Ca. TRANSMITTER Li PLUS TOTAL CABLE INDUCTANCE FOR EACH LOOP MUST NOT EXCEED BARRIER La. (SEE NOTE 14)

8. GAUGE ENCLOSURE SHALL BE GROUNDED TO EARTH GROUND THROUGH THE PROVIDED GROUND LUG IN THE ENCLOSURE. WHERE INTEGRAL CABLE IS PROVIDED, LOOP 2 SHIELD IS INSTRUMENT GROUND.

9. NO REVISIONS SHALL BE MADE WITHOUT NOTIFICATION OF APPROVAL AGENCY(S).

10. EACH LOOP ENTITY PARAMETERS
    
    Vmax= 28V
    Imax= 118mA
    C = 0
    L = 200uH

11. TEMPERATURE CODE IS T4.

12. USE ONLY NRTL LISTED AND CSA CERTIFIED DUST-TIGHT SEAL FOR CLASS AND CLASS HAZARDOUS LOCATIONS.

Equipment and Protective Systems Intended for Use in Potentially Explosive Atmospheres - Directive 94/9/EC

PTB 10 ATEX 2011 X

Manufacturer: MTS Sensor Technologie GmbH & Co. KG
Address: Auf dem Schüffel 9, 58513 Lüdenscheid, Germany

This equipment and any acceptable variation thereto are specified in the schedule to this certificate and the documents therein referred to.

The examination and test results are recorded in the confidential test report PTB Ex 10-29149.

Compliance with the Essential Health and Safety Requirements has been assured by compliance with:

If the sign "X" is placed after the certificate number, it indicates that the equipment is subject to special conditions for safe use specified in the schedule to this certificate.

This EC-type-examination Certificate relates only to the design, examination and tests of the specified equipment in accordance to the Directive 94/9/EC. Further requirements of the Directive apply to the manufacturing process and supply of this equipment. These are not covered by this certificate.

The marking of the equipment shall include the following:

II 1/2 G or II 2 G Ex ia IIA T4 or Ex ia IIB T4 Ga/Gb or Gb

SCHEDULE

EC-TYPE-EXAMINATION CERTIFICATE PTB 10 ATEX 2011 X

Description of equipment

The level sensors Level Plus M-Series, types MRA... and MC420... are applied in tanks for the continuous level measurement of liquids or for the interface detection in liquids. The level sensors Level Plus M-Series of types MRA... are furthermore used to detect the liquid temperature. The level sensors Level Plus M-Series of types MRA... can be equipped with a display for the visualization of measurement data.

The level sensors consist of an enclosure for the associated evaluation electronics, the process connection element and the sensor element with float. Depending on the design the level sensors are used in hazardous areas of explosion group II A (marking Ex ia IIA T4 Ga/Gb or Gb) or explosion group II B (marking Ex ia IIB T4 Ga/Gb or Gb)

For the respective variants, reference is made to the type code.

Category-1/2-equipment

The enclosure for the electronics system is installed in the hazardous area for category-2-equipment. The process connection elements are installed in the partition separating areas from each other where equipment of category 2 or 1 is required. The sensor element is installed in areas requiring equipment of category 1.

Category-2-equipment

The level sensors are installed in hazardous areas for category-2-equipment.

For relationship between maximum permissible ambient temperature and supplied power, reference is made to the table given below.

Electrical data

Supply and data circuits

Types MC420...
type of protection Intrinsice Safety Ex ia IIB or Ex ib IIB

Only for connection to certified intrinsically safe circuits.

Maximum values:

U = 28 V

I = 118 mA

C, negligibly low

L, = 0.2 mH

Der Prozessdruck der Medien bzw. die Mediumtemperatur muss bei Anwendungen, die Kategorie-1-Betriebsmittel erfordern, zwischen 0,8 bis 1,1 bar bzw. -20 ... +60 °C liegen. Wird von diesen oben genannten Einsatzbedingungen am Messfühler abgewichen, ist zu beachten, dass der Betreiber (auch im Störungsfall) keine eigene Erwärmung aufweist und dass der Betreiber der Anlage im Hinblick auf Drücke/Temperaturen der verwendeten Stoffe dem Betreiber obliegt. Hierbei sind die Kenndaten des Herstellers zu beachten.

(16) Bewertungs- und Prüfericht PTB Ex 10-29149

(17) Besondere Bedingungen
1. Da die Versorgungs- und Datenstromkreise der Füllstand-Transmitter betriebsmäßig geerdet sind, ist längs des Leitungszuges der Versorgungs- und Datenstromkreise innerhalb und außerhalb des explosionsgefährdeten Bereiches Potentialausgleich zu errichten.
Physikalisch-Technische Bundesanstalt
Braunschweig und Berlin
Anlage zur EG-Baumusterprüfung PTB 10 ATEX 2011 X

2. Werden die Füllstand-Transmitter mit Kunststoffschwimmern ausgerüstet, so dürfen sie nur in explosionsgefährdeten Bereichen errichtet werden, die Betriebsmittel der Kategorie 1 mit der Betriebsmittelgruppe IIA erfordern.

(18) Grundlegende Sicherheits- und Gesundheitsanforderungen
erfüllt durch die Übereinstimmung mit den vorgenannten Normen

PRODUCTS
CLASS 2258 02 - PROCESS CONTROL EQUIPMENT - For Hazardous Locations
CLASS 2258 04 - PROCESS CONTROL EQUIPMENT - Intrinsically Safe, Entity - For Hazardous Locations

CLASS 2258 02
Class I, Groups B, C and D; Class II, Groups E, F and G; Class III; Enclosure 4X:
- M-SERIES Level Gauge, Types MRAabcdefghijjk, rated 36V dc max., 4-20 mA; Suffixes in Type number denote electronics options, housing type, mounting, materials, process connections and sensor length.
- M-SERIES Digital Level Gauge, Types MGAx#xxxxxxxxxxxxx where # = B, C, D, E, 6 or 7, rated 32Vdc, 100 mA max; Suffixes in Type number denote electronics options, output, mounting, materials, process connections and sensor length.

CLASS 2258 04
Class I, Division 2, Groups A, B, C and D; Enclosure 4X:
- M-SERIES Digital Level Gauge, Types MGAx#xxxxxxxxxxxxx, where # = A, B, C, D, E, 3, 6, 7, or 9; rated 30 Vdc max., 100 mA; Suffixes in Type number denote electronics options, output, mounting, materials, process connections and sensor length.
Class I, Groups A, B, C and D; Class II, Groups E, F and G; Class III; Enclosure 4X:

- M-SERIES Level Gauge, Types MRAabcdefghijjjjk, rated 36V dc max., 4-20 mA; intrinsically safe when connected per installation Drawing 650805, Temp. Code T4; suffixes in Type number denote electronics options, housing type, mounting, materials, process connections and sensor length.

- MC420 Level Gauge, rated 36V dc, 4-20 mA; intrinsically safe when connected per installation Drawing 650805, Temp. Code T4.

- M-SERIES Digital Level Gauge, Types MGAx#xxxxxxxxxxxxx, where # = A, B, C, D, E, L, 3, 6, 7, 8, or 9 (MGAxL and MGAx8 suitable for Class I locations only); rated 30 Vdc max., 100 mA; intrinsically safe when connected per installation drawing 650838, temp. code T4; suffixes in Type number denote electronics options, output, mounting, materials, process connections and sensor length.

Class I, Groups A, B, C and D; Enclosure 4X:

- M-SERIES USTD/PTM Level Gauge, Type MUAxUxxxxxxxxxxx; rated 30 Vdc max., 100 mA; intrinsically safe when connected per installation drawing 650844, temp. code T4; suffixes in Type number denote electronics options, output, mounting, materials, process connections and sensor length.

Class I, Groups A, B, C and D:

- M-SERIES Digital Level Gauge, Type MVUxxxS; rated 30 Vdc max., 100 mA; intrinsically safe when connected per installation drawing 650838, temp. code T4; xxx in Type number denotes sensor length.

APPLICABLE REQUIREMENTS

CSA Std C22.2 No. 0-10- General Requirements - Canadian Electrical Code Part II
CSA Std C22.2 No. 25-1966 (R 2009) - Enclosures for Use in Class II, Groups E, F and G Hazardous Locations
CSA Std C22.2 No. 30-M1986 (R 2007) - Explosion-Proof Enclosures for Use in Class I Hazardous Locations
CAN/CSA-C22.2 No. 94-M91(R 2006) - Special Purpose Enclosures
CSA Std C22.2 No. 142-M1987 (R 2009) - Process Control Equipment
CAN/CSA-C22.2 No. 157-92 (R 2006) - Intrinsically Safe and Non-incendive Equipment for Use in Hazardous Locations
CSA Std C22.2 No. 213-M1987 (R 2008)- Non-Incendive Electrical Equipment for Use in Class I Division 2 Hazardous Locations
CERTIFICATE OF COMPLIANCE
HAZARDOUS (CLASSIFIED) LOCATION ELECTRICAL EQUIPMENT

This certificate is issued for the following equipment:

MGAabcdefg.hijk. M-Series Digital Level Transmitters.
XP / I / 1 / BCD / T6 Ta = 71°C; DIP / II,III / EFG / T6 Ta = 71°C; Type 4X
IS / I,II,III / 1 / ABCDEFG / T4 Ta = 71°C - 650838; Entity; Type 4X
NI / I / 2 / ABCD / T4 Ta = 71°C; Type 4X
Entity Parameters:
V_{\text{Max}} = 28 V, I_{\text{Max}} = 200 mA, C = 0 μF, L = 0 mH.
a = Output M, D, O, N or T.
b = Housing Type A, B, C, D, E, L, 3, 6, 7, 8 or 9 (A, 3, 9 are IS only) (L, 8 are IS, Class I only) (B, C, D, E, 6, 7 are XP or IS).
c = Electronics Mounting 1, 3, 4, 5 or 6.
e = Material of Construction 1, 2, 3, 9, A or C.
f = Process Connection Type 1, 4, 5, 6, 7, 8 or X.
g = Process Connection Size A, B, C, D, E, F, G, H, J or X.
h = DT 0, 1, 2, 5, 6, 7, 8, 9, A, B, C, D, E, F, G, H, J, K or L.
i = Unit of Measure M or U.
j = Length.
k = Special S, E or R.

MGAabcdefg.hijk. M-Series Digital Level Transmitters.
XP / I / 1 / BCD / T6 Ta = 71°C; DIP / II,III / 1 / EFG / T6 Ta = 71°C; Type 4X
a = Output M, D, O, N, S or T.
b = Housing Type B, C, D, E, 6 or 7.
c = Electronics Mounting 1, 3, 4, 5 or 6.
e = Material of Construction 1, 2, 3, 9, A or C.
f = Process Connection Type 1, 4, 5, 6, 7, 8 or X.
g = Process Connection Size A, B, C, D, E, F, G, H, J or X.
h = DT 0, 1, 2, 5, 6, 7, 8, 9, A, B, C, D, E, F, G, H, J, K or L.
i = Unit of Measure M or U.
j = Length.
k = Special S, E or R.
**USTD II abcdef M-Series Digital Level Transmitters.**

IS / I / I / ABCD / T4 Ta = 71°C - 650838; Entity; Type 4X  
Entity Parameters:
\[ V_{\text{Max}} = 28 \text{ V}, I_{\text{Max}} = 200 \text{ mA}, C_i = 0 \mu\text{F}, L_i = 0 \text{ mH}. \]
\[ a = \text{Unit of Measure. M or U}. \]

EXPLOSION PROTECTION
CERTIFICATE OF CONFORMITY

Cert NO.GYJ14.1052X
This is to certify that the product
Liquid Level Transmitter
manufactured by Auf dem Schuffel 9, 58513 Ludenscheid, Deutschland
(Address: Auf dem Schuffel 9, 58513 Ludenscheid, Deutschland)
which model is MC420 series
Ex marking Ex ia II A T4 Ga/Gb Ex ia II A T4 Gb
Ex ia II B T4 Ga/Gb Ex ia II B T4 Gb
product standard /

drawing number 280241

has been inspected and certified by NEPSI, and that it conforms
to GB 3836.1-2010, GB 3836.4-2010, GB 3836.20-2010
This Approval shall remain in force until 2019.02.23

Remarks
1. Conditions for safe use are specified in the attachment to this certificate.
2. Symbol "X" placed after the certification number denotes specific conditions of use,
   which are specified in the attachment to this certificate.
3. Model designation is specified in the attachment to this certificate.
4. Intrinsic safety parameters specified in the attachment to this certificate.

Director
National Supervision and Inspection Centre for
Explosion Protection and Safety of Instrumentation
Issued Date 2014.02.24

This Certificate is valid for products compatible with the documents and samples approved by NEPSI.

防爆合格证

证号：GYJ14.1052X

由 MTS Sensor Technologie GmbH & Co. KG 制造的产品：

液位变送器

型号规格：MC420系列

防爆标志：Ex ia IIA T4 Ga/Gb Ex ia IIB T4 Ga/Gb Ex ia IIB T4Gb

产品标准：/

图样编号：280241

经图样及技术文件的审查和样品检验，确认上述产品符合 GB 3836.1-2010、GB 3836.4-2010、GB 3836.20-2010 标准。

本证书有效期：2014年2月24日至2019年2月23日

备注：1. 安全使用注意事项见本证书附件。
2. 证书编号后缀“X”表明产品具有安全使用特殊条件，内容见本证书附件。
3. 型号规格说明见本证书附件。
4. 本安电气参数见本证书附件。

国家级仪器仪表防爆安全监督检验站

颁发日期：二〇一四年二月二十四日

本证书仅对与认可文件和样品一致的产品有效。

MC420 series Liquid Level Transmitter, manufactured by MTS Sensor Technologie GmbH & Co.KG, has been certified by National Supervision and Inspection Center for Explosion Protection and Safety of Instrumentation (NEPSI). The Liquid Level Transmitter accords with following standards:

GB3836.1-2010  Explosive atmospheres-Part 1: Equipment – General requirements
GB3836.4-2010  Explosive atmospheres-Part 4: Equipment protection by intrinsic safety "i"
GB3836.20-2010  Explosive atmospheres-Part 20: Equipment with equipment protection level (EPL) Ga

Liquid Level Transmitter has the Ex marking Ex ia IIA T4 Ga/Gb or Ex ia IIA T4 Gb or Ex ia IIB T4 Ga/Gb or Ex ia IIB T4 Gb.

The certificate number is GYJ14.1052X.

The certified type codes are:

MC420abcdef

a to d indicates length, which is specified in the instruction manual.

e indicates optional float, which could be O or F.

f indicates Ex specifications, which could be P or 2.

1. Special conditions for safe use

The suffix "X" placed after the certificate number indicates that this product is subject to special conditions for safe use:

- Ground potential balance is required when used in hazardous location.
- For applications in area where the use of EPL Ga apparatus is required, electrostatic charges on the non-metallic parts of Liquid Level Transmitter shall be avoided.
- The relationship between Ex marking and e specified in the model specification are as following:

<table>
<thead>
<tr>
<th>code</th>
<th>Ex marking</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>Ex ia II A T4 Ga/Gb or Ex ia II A T4 Gb or Ex ia II B T4 Ga/Gb or Ex ia II B T4 Gb</td>
</tr>
</tbody>
</table>
(Attachment I)

<table>
<thead>
<tr>
<th>code</th>
<th>Ex marking</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Ex ia II B T4 Ga/Gb or Ex ia II B T4 Gb</td>
</tr>
</tbody>
</table>

note 1: See instruction manual for details.

2. Conditions for safe use

2.1 The relationship between intrinsic safety parameters and ambient temperature range are as following:

<table>
<thead>
<tr>
<th>$T_{amb}$</th>
<th>$U_i$</th>
<th>$I_i$</th>
<th>$C_i$</th>
<th>$L_i$</th>
<th>$P_i$</th>
</tr>
</thead>
<tbody>
<tr>
<td>-20°C~+40°C</td>
<td>28V</td>
<td>118mA</td>
<td>$\approx 0\mu F$</td>
<td>0.2mH</td>
<td>1.3W</td>
</tr>
<tr>
<td>-20°C~+60°C</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.2W</td>
</tr>
<tr>
<td>-20°C~+80°C</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.0W</td>
</tr>
</tbody>
</table>

2.2 The Liquid Level Transmitter must be used together with safety barriers to form an intrinsic safety system thus can be used in hazardous locations. The wiring and installation must fulfill the requirements from instruction manuals of the Liquid Level Transmitter and chosen safety barriers.

2.3 The connection cable between the transmitter and associated apparatus should be two-core shielded cable with insulating sheath. The shielding layer should be grounded in safe area and insulated from the enclosure.

2.4 Forbid end user to change the configuration to ensure the equipment’s explosion protection performance.

2.5 When installation, use and maintenance of Liquid Level Transmitter, observe following standards

GB3836.13-1997 "Electrical apparatus for explosive gas atmospheres Part 13: Repair and overhaul for apparatus used in explosive gas atmospheres"

GB3836.15-2000 "Electrical apparatus for explosive gas atmospheres Part 15: Electrical installations in hazardous area (other than mines)"

GB3836.16-2006 "Electrical apparatus for explosive gas atmospheres Part 16: Inspection and maintenance of electrical installation (other than mines)"

GB50257-1996 "Code for construction and acceptance of electric device for explosion atmospheres and fire hazard electrical equipment installation engineering"

3. Manufacturer’s Responsibility

3.1 Special condition for safe use specified above should be included in the instruction manual.

3.2 Manufacturing should be done according to the documentation approved by NEPSI.

3.3 Following items should be added to the nameplate:

a) NEPSI logo

b) Ex marking
c) Certificate number

d) Ambient temperature range

e) Intrinsic safety parameters

National Supervision and Inspection Center for Explosion Protection and Safety of Instrumentation

GYJ14.1052X防爆合格证附件 I

由MTS Sensor Technologie GmbH & Co.KG生产的MC420系列液位变送器（以下简称变送器），经国家级仪器仪表防爆安全监督检验站（NEPSI）检验，符合以下国家标准的规定：

- GB3836.1-2010 爆炸性环境 第1部分：设备 通用要求
- GB3836.4-2010 爆炸性环境 第4部分：由本质安全型 “i” 保护的设备
- GB3836.20-2010 爆炸性环境 第20部分：设备保护级别（EPL）为Ga级的设备
- 产品防爆标志为Ex ia II A T4 Ga/Gb或Ex ia II A T4 Gb或Ex ia II B T4 Ga/Gb或Ex ia II B T4 Gb，防爆合格证号为GYJ14.1052X。

本次认可的产品型号为MC420abcde，其中：
- abc代表测量管长度，详见使用说明书；
- d代表可选浮子，可为O或F；
- e代表防爆信息，可为P或2；

一、产品安全使用特殊条件

防爆合格证号后的X表示其安全使用特殊条件，具体如下：

- 变送器在现场使用时必须保证地电位平衡。
- 当产品的测量元件作为设备保护等级（EPL）为Ga级使用时，应采取措施以防止静电点燃危险。
- 产品防爆标志与产品型号中e代码的关系如下（注1）：

<table>
<thead>
<tr>
<th>代码e</th>
<th>防爆标志</th>
</tr>
</thead>
<tbody>
<tr>
<td>P</td>
<td>Ex ia II A T4 Ga/Gb或Ex ia II A T4 Gb或Ex ia II B T4 Ga/Gb或Ex ia II B T4 Gb</td>
</tr>
<tr>
<td>2</td>
<td>Ex ia II B T4 Ga/Gb或Ex ia II B T4 Gb</td>
</tr>
</tbody>
</table>

注1：具体防爆标志参见产品使用说明书。
二、产品使用注意事项

1. 变送器的最大输入参数（LOOP1，LOOP2）与使用环境温度范围的关系如下：

<table>
<thead>
<tr>
<th>使用环境温度</th>
<th>U₁</th>
<th>I₁</th>
<th>C₁</th>
<th>L₁</th>
<th>P₁</th>
</tr>
</thead>
<tbody>
<tr>
<td>-20℃~+40℃</td>
<td>28V</td>
<td>118mA</td>
<td>≈0μF</td>
<td>0.2mH</td>
<td>1.3W</td>
</tr>
<tr>
<td>-20℃~+60℃</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.2W</td>
</tr>
<tr>
<td>-20℃~+80℃</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td>1.0W</td>
</tr>
</tbody>
</table>

2. 变送器必须与已通过防爆认证的关联设备配套共同组成本质安全防爆系统方可用于现场存在爆炸性气体混合物的危险场所。其系统接线必须同时遵守产品和所配关联设备的使用说明书要求，接线端子不得接错。

3. 变送器与关联设备的连接电缆应为带绝缘护套的屏蔽电缆，其屏蔽层应接地。

4. 用户不得自行随意更换该产品的电气零部件，应会同产品制造商共同解决运行中出现的故障，以免影响防爆性能和损坏现象的发生。

三、制造厂责任

1. 产品制造厂必须将上述产品安全使用特殊条件及使用注意事项纳入该产品的使用说明书中。

2. 制造厂必须严格按照NEPSI认可的条件资料生产。

3. 产品铭牌中应至少包括下列内容：

   a) NEPSI认可标志
   b) 产品防爆标志
   c) 防爆合格证号
   d) 使用环境温度范围
   e) 本质安全参数

EC Declaration of Conformity

MTS Systems Corporation - Sensors Division, 3001 Sheldon Drive, 27513 Cary, NC, USA

declares as manufacturer in sole responsibility that the products
declare en qualité de fabricant sous sa seule responsabilité que les produits
comply with the regulations of the following European Directives:
sont conformes aux prescriptions des directives européennes suivantes:

- 94/9/EC Equipment and protective systems for use in potentially explosive atmospheres
  Geräte und Schutzsysteme zur Verwendung in explosionsgefährdeten Bereichen
- 2004/108/EC Electromagnetic Compatibility
  Elektromagnetische Verträglichkeit

Applied harmonized standards:
Normes harmonisées appliquées :

- EN 60079-0:2009
- EN 60079-11:2007
- EN 60079-26:2007
- EN 61326-1:2006
- EN 61326-2-3:2006

EC type examination certificate:
PTB 10 ATEX 2011 X
Physikalisch-Technische Bundesanstalt (PTB)
Braunschweig, Germany

Notified body for quality assurance control:
Physikalisch-Technische Bundesanstalt (PTB)
Braunschweig, Germany

Marking / Kennzeichnung / Marquage :
- Ex IIA T4 Ga/Gb resp.
- Ex IIB T4 Gb resp.
- Ex IIA T4 Ga/Gb resp.
- Ex II 2G Ex ia IIA T4 Gb
