

Data Sheet

MHRM Analog

Magnetostrictive Linear Position Sensors

- For embedded or externally threaded installation
- Sensor rod with \varnothing 7 mm or \varnothing 10 mm
- Resolution: ± 0.1 mm typ.
- Compliant with EN 50121-3-2

MEASURING TECHNOLOGY

For position measurement, the absolute, linear Temposonics position sensors make use of the properties offered by the specially designed magnetostrictive waveguide. Inside the sensor a torsional strain pulse is induced in the waveguide by momentary interaction of two magnetic fields. The interaction between these two magnetic fields produces a strain pulse, which is detected by the electronics at the head of the sensor. One field is produced by a moving position magnet, which travels along the sensor rod with the waveguide inside. The other field is generated by a current pulse applied to the waveguide. The position of the moving magnet is determined precisely by measuring the time elapsed between the application of the current pulse and the arrival of the strain pulse at the sensor electronics housing. The result is a reliable position measurement with high accuracy and repeatability.

PRODUCT DESCRIPTION AND TECHNOLOGY

The MHRM sensor extends the rugged design of the Temposonics® MH-Series sensors to railway applications. With two mounting styles, the responsive magnetostrictive linear position sensors can be integrated into most installations. The inherent absolute capabilities ensure that the MHRM sensor is always ready.

The new MHRM model meets the requirements for shock and vibration according to EN 61373 and IEC 60068-2-64 and are compliant with EN 50121-3-2 and EN 61000-6-x (see technical data).

THE INTERCONNECTION PLUG

Temposonics presents the InterConnection plug combined with our reliable M12 connector system. The connection plug is modular, configurable and can be combined with all common connector systems. The M12 connector meets the highest protection requirements that are important for harsh environments in mobile hydraulic applications. The IP69K protection type means

- ✓ **Safe and easy installation**
- ✓ **No soldering or crimping of connecting leads**

①

②

③

④

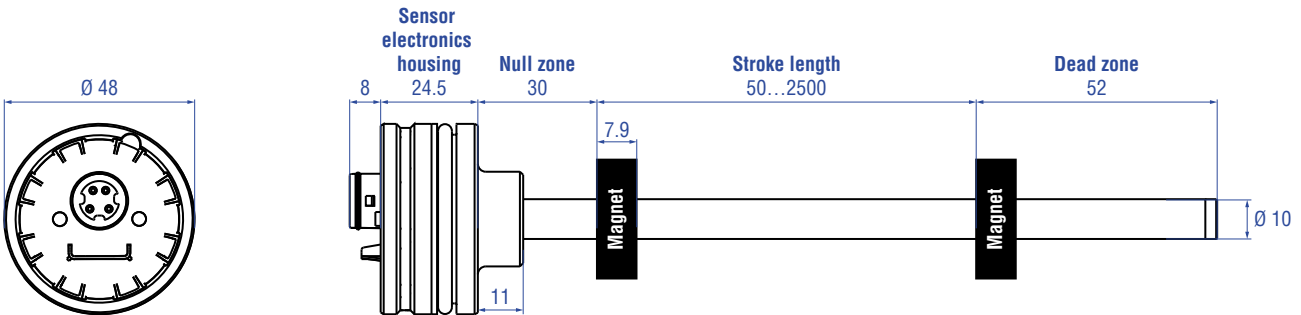

1. The InterConnection plug invented by Temposonics.
2. The InterConnection plug combined with our reliable M12 connector system.
3. The connector insert is taken out of the cylinder through a bore hole. The flange can easily be clicked in position from outside. Four standard screws must be tightened to mount the connector system on the cylinder. In the case of using angled type connectors, the connector insert can be rotated inside the flange in 45° steps.
4. With a corresponding mating plug the connector system fulfills an IP rating of IP69K.

MECHANICAL INSTALLATION – MHRM EMBEDDED

Installation in a hydraulic cylinder

The robust Temposonics® MH sensor is designed for direct stroke measurement in hydraulic cylinders.

The Temposonics® MH sensor can be installed from the head side or the rod side of the cylinder depending on the cylinder design. In both installation methods, the sensor seals the cylinder by using an O-Ring and backup ring which is installed on the sensor housing.

Fig. 4: Example of In-Cylinder assembly

NOTICE

The bore depth in piston:
Null zone + Stroke length + Dead zone + > 3 mm

Space requirements

B	D	d	H	h
52 mm	48H8	39.9 ^{+0.2} mm	25 mm	> 15 mm

Fig. 5: Space requirements for cylinder

- The position magnet shall not touch the pressure pipe.
- Do not exceed the operating pressure.
- Note the piston rod drilling:
 - Ø 7 mm rod: ≥ Ø 10 mm
 - Ø 10 mm rod: ≥ Ø 13 mm

Set screw

e.g. retaining with set screw ISO 4026 M5×10 (with flat point!).

Fastening torque: 0.44 Nm to 0.50 Nm

Notice: Ensure threads are free of oil, grease and debris

MECHANICAL INSTALLATION – MHRM THREADED

Hydraulics sealing

For sealing the flange contact surface, a sealing via an O-ring in the undercut is necessary.

O-ring size (included with threaded sensors):

For threaded flange (3/4"-16 UNF):

O-ring 16.4 × 2.2 mm (part no. 560315)

For threaded flange (M18×1.5):

15.3 × 2.2 mm (part no. 401133)

Fig. 10: Sealing via O-ring in the flange undercut

- Note the fastening torque of 50 Nm.
- The flange contact surface must be seated completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not rub on the sensor rod.
- The peak pressure should not be exceeded.
- Protect the sensor rod against wear.

NOTICE

- The bore depth in piston:
Null zone + Stroke length + Dead zone + > 3 mm
- Note the piston rod drilling:
- Ø 7 mm rod: ≥ Ø 10 mm
- Ø 10 mm rod: ≥ Ø 13 mm
