Precise position measurement in industrial presses

Position measurement during material ejection of the injection moulding machine

Simultaneous position measurement of up to 30 knives during knife adjustment, cutting and wrapping device

Simultaneous position measurement of up to 30 needles

Precise position measurement in industrial presses

Reliable position measurement in linear motors

Temposonics also offers solutions for Mobile Hydraulics (off-highway vehicles) and Liquid Level applications.
The absolute, linear position sensors provided by Temposonics rely on the company’s proprietary Temposonics® magnetostrictive technology, which can determine position with a high level of precision and robustness.

Each Temposonics position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the end of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

The technology, based on magnetostriction, does not rely on moving parts and is not exposed to mechanical stress. Therefore, the sensors exhibit considerably longer lifespans and much higher reliability when compared to other technologies, even in harsh working conditions. Furthermore, since the output from sensors with magnetostrictive technology corresponds to an absolute position, rather than a relative value, it is not required to recalibrate sensors.
THE NEW GENERATION

Temposonics® R-Series V position sensors are the most advanced magnetostrictive sensors in the market and are ready for Industry 4.0 applications. They support predictive maintenance with a variety of smart features that enable users to retrieve additional information from inside the application. Users of the absolute, non-contact position sensors benefit from an improved performance as they have a higher resistance against shock, vibration, and high temperatures than ever before. The backwards compatibility of the R-Series V enables the easy replacement of the previous sensor models. This means that also existing applications can benefit from the new features of Temposonics® R-Series V.

Industry 4.0 starts with information
With the new sensor generation and the TempoLink® and TempoGate® smart assistants it is possible to evaluate more parameters while the application is continually running.

“Temposonics® R-Series V is the follow up to our fourth generation. Based on our long-standing experiences, R-Series V is the next step in the innovative evolution of magnetostrictive position sensors. By maintaining the qualities we are well-known for and at the same time pushing the boundaries, we are able to provide our customers the best R-Series we ever made.”

André Beste, Technical Marketing Manager

TRUST IN WHAT YOU KNOW. NOW EVEN BETTER.
SUPERIOR PERFORMANCE

Have a challenging application? Need reliable performance combined with resistance to high temperature, dirt and vibration?

Extreme demands require extraordinary solutions. Temposonics responds to this with an extensive range of measuring stroke options, simultaneous measurement of multiple magnets, smart electronic designs with built-in diagnostics, innovative housing concepts and a wide variety of controller interfaces. Our Temposonics® magnetostrictive technology is maximized with powerful electronics. The robust designs guarantee maximum reliability, high-precision position measurements and long-term operation in the harshest environments.

Success where others fail.
COMPACT SOLUTIONS

Need a reliable sensing solution designed for limited space or difficult access?

In line with your application requirements, Temposonics delivers solutions which fit your exact needs in terms of design and performance – from ultra-low profiles and detached electronics to compact hazardous area approved housings. In food & beverage, plastics, textiles and other industries, Temposonics® technology guarantees maximum productivity.

Always the smartest solution.
MAXIMUM SAFETY

Explosive environment or a dangerous area?

The position sensors from Temposonics are the first choice when it comes to meeting hazardous area standards – including ATEX (Europe), UK Ex (England, Wales, Scotland), NEC (USA), CEC (Canada), IECEx (global market), KCC (South Korea), CCC (Chinese market) and the Japanese approval for use in Class I, II, III, Division 1, Division 2 and Zone 0/1, Zone 1, Zone 2, Zone 21 and Zone 22. Optimized for applications where there is potential for exposure to flames and caustic substances, as well as the possibility of explosive atmospheres, our sensors are highly suited to implementation in chemical plants, offshore oil/gas rigs and other applications of this kind.

Maximum safety for machines and their operators.

INNOVATIVE TECHNOLOGY

Our mission at Temposonics is to provide outstanding quality and application knowledge. We focus on understanding your challenges and delivering the best sensor solution to let you attain the highest level of productivity. Our resources are dedicated to the continual development of new products and delivering unparalleled application-oriented solutions with agility. It is no coincidence that our R&D is one of the largest teams within our organization.

Local R&D & Production, Application Know-How & Service
At the head of our sensors, a threaded flange and O-ring allow the device to be mounted and sealed into a port opening in the cylinder end cap. Alternatively, some sensor designs enable direct embedding of the complete sensor (including the supporting electronics) inside the cylinder. Here the sensor’s pressure-resistant rod fits into a bore that is drilled through the center of the piston head and rod assembly. The position magnet is mounted on the top of the piston head or installed in a shallow counter-bore within the piston head.

Modular, environmentally friendly design
The modular design of the R-Series V, R-, G- and GB-Series devices allows for easy replacement of the sensing element and electronics without breaking the cylinder’s high pressure seal. This not only prevents leaks from the cylinder port, but also significantly reduces maintenance costs and downtime. Temposonics® technology is mounted inside cylinders across a broad range of industry sectors – from steel rollers to wood plants, from food processing to renewable energy.

Have you ever thought about how much time you’re wasting waiting for adequate support or your order?

Our commitment at Temposonics is to consistently deliver quality products on time to meet your schedules and provide first-class service. Trust in our continuous product development of high-performance position sensors and rely on our highly qualified personnel.

At Temposonics, we live by the promise of unparalleled service that enables us to take all available means to exceed your expectations. Our goal is to support you optimizing your productivity and we love the idea to make you save your valuable time.

Your Temposonics Team
– TRUST THE EXPERTS –
E-SERIES
(EH, ET, EP, EL, EP2, ER, EE)

The Temposonics® E-Series are very compact sensor models suitable for situations where space-constrained mounting is a critical factor. Temposonics offers different designs to meet the needs of various industrial applications.

This series features three rod models for in-cylinder integration: EH, ET, EE (embedded in cylinder). The space-saving profile models EP, EL, EP2 and ET impress with their compact housings. On the EP2 sensor, the position magnet can travel along the entire flat housing profile.

The ER sensor has an aluminium cylinder with a guided driving rod which contains both the sensor element and the electronics. The position is detected via the solid extractable driving rod.

Temposonics® E-Series IO-Link now available with multi-position measurement. These sensors can now detect the position of up to eight magnets or the position and the velocity of up to four magnets simultaneously.

Typical applications for E-Series sensors are plastics processing, food & beverage processing, control systems and packaging.

The Temposonics® G-Series provides high durability and accurate position measurement solutions in harsh industrial settings. The sensor element is installed in a pressure-resistant stainless steel rod or aluminum profile. A double-shielded housing protects the electronics and offers excellent EMI immunity.

The GT2/GT3 and GTE models feature multiple independent measuring systems contained in one compact housing. Each measuring system has its own channel with sensor element, power and evaluation electronics and output signal. The GTE model is embedded in a cylinder for added robustness. Example applications include control valves, fluid cylinders, turbine pitch control, ship control systems and floodgates.

GB-SERIES
With threaded flange (GB-M, GB-T) or pressure fit flange (GB-J, GB-K, GB-N, GB-S)

The Temposonics® GB-Series is designed to be incorporated into hydraulic cylinders, such as those typically used in power generation plants. The flat, compact electronics housing facilitates deployment in restricted spaces.

The operational advantages of these sensors are: high pressure resistance (the GB-J sensor offers up to 800 bar operating pressure), strong immunity to EMI and ability to operate in temperatures up to +100 °C (+212 °F). High durability and increased resistance to rust is achieved by using 316L stainless steel (GB-N model). The GB series sensors can be programmed using a handheld programmer connected to a USB port on a computer.

The GB with threaded flange (GB-M/GB-T) offers further advantages such as a sensor electronics housing with its electrical connection that can be rotated 360 degrees to easily achieve the necessary connection orientation. If needed, the sensor element and electronics can be replaced while the flange is still installed in the cylinder. This means that the hydraulic circuit is not interrupted which results in lower maintenance costs and reduced downtime.

Output (resolution)
Current 16 bit
Voltage 16 bit
SSI 5 µm

Operating conditions
Temperature −40…+100 °C (−40…+212 °F)
Shock test 100 g (single shock), IEC standard 60068-2-27
Vibration test 15 g/10…2000 Hz
IEC standard 60068-2-6 (excluding resonant frequencies)

Design
Stroke length 25…3250 mm (1…128 in.)

Accuracy
Linearity < ±0.02 % F.S.

Electrical connection
Operating voltage +24 VDC (−15/+20 %)

R-SERIES V
The new generation (RH5, RP5, RFV, RDV, RM5)

Temposonics’ R-Series V is the successor to our R-Series 4. The new sensors have higher resistance to vibration and high temperatures, are ready for Industry 4.0 and fit perfectly into existing applications.

The new Industry 4.0 features for all outputs offer users unique advantages, as they provide additional information about the process in addition to the pure process data (position/speed). Status and statistical data are recorded and processed during operation and can be used to better understand the processes within the application.

In combination with the increased performance and improved robustness, the user is offered the certainty that existing applications work even more reliably and that future requirements are already being met.

The new sensor generation is available as rod version (RH5) for cylinder integration, profile version (RP5) for position measurement of motion axis, with detached electronics (RDV), with flexible rod (RFV) for stroke lengths up to 20 m and with protective housing (RM5) with ingress protection IP68/IP69.

Operating conditions

Temperature: -40...+85 °C (-40...+185 °F)

Shock test:
RH5/RP5: 150 g/11 ms
RM5/RDV: 100 g/11 ms
IEC standard 60068-2-27

Vibration test:
RH5/RP5: 30 g/10...2000 Hz
RFV: 5 g/10...2000 Hz
RM5/RDV: 10 g/10...2000 Hz
IEC standard 60068-2-6 (excluding resonant frequencies)

Design

Stroke length:
RH5: 25...7620 mm (1...300 in.)
RP5: 25...6350 mm (1...250 in.)
RM5: 25...7615 mm (1...299.8 in.)
RFV: 150...20,000 mm (6...787 in.)
RDV: 25...5080 mm (1...200 in.)

Accuracy

Linearity deviation
RH5/RP5/RM5/RDV: < 0.01 % F.S. (minimum ±50 µm)
RFV: < ±0.02 % F.S. (Minimum ±100 μm)

Electrical connection

Operating voltage: +12...30 VDC ±20 % (9.6...36 VDC)

SMART ASSISTANT
TempoLink®

The TempoLink® smart assistant is designed for mobile use and thanks to its compact design it fits in any pocket. The accessories supports the integration of the sensor into the application and the transfer of additional information to the user. With the assistant, the user can call up data such as the current sensor status, the internal sensor temperature, the number of operating hours and the distance travelled by the position magnets. An evaluation of these values can help in the creation of predictive maintenance plans and thus lead to an optimization of production.

The connection and communication between the Temposonics® R-Series V sensor and the TempoLink® smart assistant is via the power supply. The assistant can transfer the various sensor parameters wirelessly or via the USB port while the sensor continues to operate.

Because the TempoLink® smart assistant provides its own WiFi access point, WiFi-enabled devices such as smartphones, tablets or laptops can access it very easily. No software installation or app is required, nor is access to a company network.

SMART ASSISTANT
TempoGate®

The TempoGate® smart assistant is designed for the permanent integration into control cabinets and supports all R-Series V sensors with smart diagnostics and operating statistics. Once connected via power supply, the sensors and the assistant can communicate bidirectional. Via the integrated OPC UA server, this data can also be transmitted to other devices via OPC UA during operation. This allows the user to monitor additional sensor parameters and combine this information with other machine status data. In addition, the data can be transferred via LAN or WiFi to a graphical user interface on the smartphone, tablet or computer.

The Temposonics® R-Series V position sensors, in conjunction with the TempoGate® smart assistant, provide the operator with detailed information to improve machine performance, optimize maintenance cycles and detect problems early to increase machine operating availability.

**R-SERIES**

*(RH, RP, RF, RD4, RT4, RS)*

The Temposonics® R-Series features the highest performance, accuracy and reliability in magnetostrictive linear position sensors designed for advanced motion control implementations. With a variety of housing styles and electrical interfaces, the R-Series can be integrated into a wide range of applications. They have a modular construction and are extremely robust. The double-shielded design assures the best immunity against EMI. Whether it is a rod version (RH), profile version (RP), has detached electronics (RD4), built-in redundancy (RT4) or a flexible rod (RF), the R-Series is a highly compelling sensor solution. For extremely harsh environments, Temposonics offers the RS sensor with IP69K protective housing.

T-SERIES
(TH)

The Temposonics® T-Series sensors are designed for hazardous working environments, where they may have to deal with flames, caustic substances and potentially explosive atmospheres (such as chemical plants, offshore oil/gas rigs, etc.).

The T-Series carries the ATEX certification for Europe, the UK Ex certificate for market in England, Wales and Scotland, the NEC and CEC certificates for the US and Canada, the IECEx certificate for the global market, the KCs certificate for the South Korean market, the CCC certificate for the Chinese market as well as the Ex certificate for Japan for use in Class I, II, III, Division 1, Division 2 and Zone 0/1, Zone 1, Zone 2, Zone 21 and Zone 22.

Output (resolution)

- Current Minimum 16 bit
- SSI Minimum 0.5 µm
- CANbus Minimum 2 µm

Operating conditions

- Temperature 
  -40...+75 °C (−40...+167 °F)
