1. Introduction

1.1 Purpose and use of this manual

Before starting the operation of Temposonics position sensors, read this documentation thoroughly and follow the safety information. Keep the manual for future reference!

The content of this technical documentation and of its appendix is intended to provide information on mounting, installation and commissioning by qualified automation personnel or instructed service technicians who are familiar with the project planning and dealing with Temposonics sensors.

1.2 Used symbols and warnings

Warnings are intended for your personal safety and for avoidance of damage to the described product or connected devices. In this documentation, safety information and warnings to avoid dangers that might affect the life and health of operating or service personnel or cause material damage are highlighted by the pictogram defined below.

<table>
<thead>
<tr>
<th>Symbol</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>NOTICE</strong></td>
<td>This symbol is used to point to situations that may lead to material damage, but not to personal injury.</td>
</tr>
</tbody>
</table>

2. Safety instructions

2.1 Intended use

This product must be used only for the applications defined under item 1 to item 4 and only in conjunction with the third-party devices and components recommended or approved by Temposonics. As a prerequisite of proper and safe operation, the product requires correct transport, storage, mounting and commissioning and must be operated with utmost care.

1. The sensor systems of all Temposonics® series are intended exclusively for measurement tasks encountered in industrial, commercial and laboratory applications. The sensors are considered as system accessories and must be connected to suitable evaluation electronics, e.g. a PLC, IPC, indicator or other electronic control unit.
2. The sensor’s surface temperature class is T4.
3. The EU-Type Examination Certificates and Certificates of Compliance have to be taken into account including any special condition defined therein.

4. The position sensor may be used in zones (ATEX, UK Ex, IECEx, KCs, CCC, PESO, Japanese approval) and Classes, Divisions and Zones (CEC, NEC) according to chapter 8. Any use of this product outside of these approved areas will void the warranty and all manufacturer’s product responsibilities and liabilities. For non-hazardous areas Temposonics recommends to use the version N (not approved).

### Zone concept

---

1/ The term “qualified technical personnel” characterizes persons who:
- are familiar with the safety concepts of automation technology applicable to the particular project
- are competent in the field of electromagnetic compatibility (EMC)

- have received adequate training for commissioning and service operations
- are familiar with the operation of the device and know the information required for correct operation provided in the product documentation
2.2 Forseeable misuse

<td>Error in position measurement</td>
</tr>
</tbody>
</table>

2.3 Installation, commissioning and operation

The position sensors must be used only in technically safe condition. To maintain this condition and to ensure safe operation, installation, connection, cable installation and service, work may be performed only by qualified technical personnel, according to IEC 60079-14, TRBS 1203, Canadian Electrical Code (CEC) and National Electrical Code (NEC) and local regulations.

If danger of injury to persons or of damage to operating equipment is caused by sensor failure or malfunction, additional safety measures such as plausibility checks, limit switches, EMERGENCY STOP systems, protective devices etc. are required. In the event of trouble, shut down the sensor and protect it against accidental operation.

Safety instructions for commissioning

To maintain the sensor’s operability, it is mandatory to follow the instructions given below.

1. Follow the specifications given in the technical data.
2. Ensure that equipment and associated components used in a hazardous environment are selected and installed in compliance with regulations governing the geographical location and facility. Only install equipment that complies with the types of protection relevant to the applicable Classes, Zones, Divisions and Groups.
3. In explosive atmospheres use only such auxiliary components that meet all requirements of the local and national standards.
4. The potential equalisation of the system has to be established according to the regulations of erection applicable in the respective country of use (VDE 0100 part 540; IEC 364-5-54).
5. Sensors from Temposonics are approved only for the intended use in industrial environments (see chapter “2.1 Intended use” on page 3). Contact the manufacturer for advice if aggressive substances are present in the sensor environment.
6. Measures for lightning protection have to be taken by the user.
7. The user is responsible for the mechanical protection of the sensor.
8. The sensor may be used only for fixed installations with permanently wired cables. The user shall ensure that cables and cable glands correspond to the risk assessment of the hazardous application as well as to thermic, chemical and mechanical environmental conditions. The user is also responsible for the required strain relief. When selecting the sealing, the maximum thermal load of the cables must be taken into account.
9. The user is responsible for meeting all safety conditions as outlined by:
   • Installation instructions
   • Local prevailing standards and regulations
10. Any parts of the equipment which got stuck (e.g. by frost or corrosion) may not be removed by force if potentially explosive atmosphere is present.
11. The surface temperatures of equipment parts must be kept clearly below the ignition temperature of the forseeable air/dust mixtures in order to prevent the ignition of suspended dust.
How to ensure safe commissioning
1. Protect the sensor against mechanical damage during installation and operation.
2. Do not use damaged products and secure them against unintentional commissioning. Mark damaged products as being defective.
3. Prevent electrostatic charges.
4. Do not use the sensor in cathodic systems for corrosion protection. Do not allow parasitic currents on the sensor housing.
5. Switch off the supply voltage prior to disconnecting or connecting the connectors.
6. Connect the sensor very carefully and pay attention to the polarity of connections, power supply as well as to the shape and duration of control pulses.
7. Cable entry temperature and branching point temperature may reach 104 °C (219 °F) and 116 °C (241 °F) respectively. Select suitable cable and entry device.
8. For field wiring, use cables suitable for the service temperature range of –40 °C (–40 °F) to +116 °C (241 °F).
9. Do not open when energized. Open the sensor only as shown in Fig. 6 on page 13.
10. A seal shall be installed within 18” of the enclosure (for NEC/CEC only).
11. Use only approved power supplies of Category II according to IEC 61010-1.
12. Ensure that the specified permissible limit values of the sensor for operating voltage, environmental conditions, etc. are met.
13. Make sure that:
   • the sensor and associated components were installed according to the instructions
   • the sensor enclosure is clean
   • all screws (only those of quality 6.8, A2-50 or A4-50 are allowed) are tightened according to specified fastening torque in Fig. 6
   • the cable glands certified according to the required hazardous area classification and IP protection are tightened according to the manufacturer’s specifications
   • surfaces limiting the joint shall not be machined or painted subsequently (flameproof enclosure)
   • surfaces limiting the joint have not been provided with a seal (flameproof enclosure)
   • the magnet does not grind on the rod. This could cause damage to the magnet and the sensor rod. If there is contact between the moving magnet (including the magnet holder) and the sensor rod, make sure that the maximum speed of the moving magnet is less or equal 1 m/s.
14. Ground the sensor via one of the two ground lugs. Both the sensor and the moving magnet including magnet holder must be connected to protective ground (PE) to avoid electrostatic discharge (ESD).
15. Before applying power, ensure that nobody’s safety is jeopardized by starting machines.
16. Check the function of the sensor regularly and provide documentation of the checks (see chapter “6.2 Maintenance” on page 32).

2.4 Safety instructions for use in explosion-hazardous areas
The sensor has been designed for operation inside explosion-hazardous areas. It has been tested and left the factory in a condition in which it is safe to operate. Relevant regulations and standards have been observed. According to the marking (ATEX, UK Ex, IECEx, CEC, NEC, KCs, CCC, PESO, Japanese approval) the sensor is approved only for operation in defined hazardous areas (see chapter “2.1 Intended use” on page 3).

When do you need an external fuse?

<table>

</tr>
</thead>
<tbody>
<tr>
<td>Zone 0 (rod only)</td>
<td>External fuse required</td>
</tr>
<tr>
<td>Zone 1/21</td>
<td>No additional fuse</td>
</tr>
<tr>
<td>Zone 2/22</td>
<td>No additional fuse</td>
</tr>
<tr>
<td>Div. 1</td>
<td>External fuse recommended</td>
</tr>
</tbody>
</table>

How to install a T-Series sensor in Zone 0 according to the guidelines (ATEX, UK Ex, IECEx, CEC, NEC, KCs, CCC, PESO, Japanese approval)
1. Install an external fuse in compliance with IEC 127 outside the Ex-atmosphere. Connect it upstream to the equipment.
   Current: 125 mA
   The fuse must be able to cut a current of 300 mA within 2 minutes in case of failure.
2. Install the sensor housing in Zone 1, Zone 2, Zone 21 or Zone 22. Only the rod section (for version D, G, and E) can extend into Zone 0.
3. Follow the safety regulations detailed in IEC/EN 60079-26, ANSI/ISA 60079-26 (12.00.03), ANSI/ISA/IEC/EN 60079-10-1 and JNIOSH-TR-46-2 to ensure isolation between Zone 0 and Zone 1.
4. When installing the TH sensor in the boundary wall for Zone 0, the corresponding requirements in ANSI/ISA/IEC/EN 60079-26 and ANSI/ISA/IEC/EN 60079-10-1 have to be noticed. Thereby the screw-in thread is to be sealed air tightly (IP67) according to ANSI/ISA/IEC/EN 60079-26 and ANSI/ISA/IEC/EN 60079-10-1.
2.5 Warranty

Temposonics grants a warranty period for its position sensors and supplied accessories relating to material defects and faults that occur despite correct use in accordance with the intended application\(^2\). The Temposonics obligation is limited to repair or replacement of any defective part of the unit. No warranty can be provided for defects that are due to improper use or above average stress of the product as well as for wear parts. Under no circumstances will Temposonics accept liability in the event of offense against the warranty rules, no matter if these have been assured or expected, even in case of fault or negligence of the company.

Temposonics explicitly excludes any further warranties. Neither the company’s representatives, agents, dealers nor employees are authorized to increase or change the scope of warranty.

2.6 Return

For diagnostic purposes, the sensor can be returned to Temposonics. Any shipment cost is the responsibility of the sender \(^2\). For a corresponding form, see chapter “10. Appendix” on page 40.

**NOTICE**

When returning sensors, place protective caps on male and female connectors of the sensor. For pigtail cables, place the cable ends in a static shielding bag for electrostatic discharge (ESD) protection. Fill the outer packaging around the sensor completely to prevent damage during transport.

### 3.4 Scope of delivery

**TH (rod sensor):**
- Sensor
4. Product description and commissioning

4.1 Functionality and system design

Product designation
• Position sensor Temposonics® T-Series

Sensor model
• Temposonics® TH (rod sensor)

Stroke length
• 25…7620 mm (1…300 in.)
• 25…3760 mm (1…148 in.) for shock improved option

Output signal
• SSI

Application
Temposonics position sensors are used for measurement and conversion of the length (position) variable in the fields of automated systems and mechanical engineering. The T-Series sensors are designed for installation in a raised or flat-face flanged hydraulic cylinder, for use as an open-air position sensor or as a liquid level sensor with the addition of a float.

Principle of operation and system construction
The absolute, linear position sensors provided by Temposonics rely on the company’s proprietary Temposonics® magnetostrictive technology, which can determine position with a high level of precision and robustness. Each Temposonics position sensor consists of a ferromagnetic waveguide, a position magnet, a strain pulse converter and supporting electronics. The magnet, connected to the object in motion in the application, generates a magnetic field at its location on the waveguide. A short current pulse is applied to the waveguide. This creates a momentary radial magnetic field and torsional strain on the waveguide. The momentary interaction of the magnetic fields releases a torsional strain pulse that propagates the length of the waveguide. When the ultrasonic wave reaches the end of the waveguide it is converted into an electrical signal. Since the speed of the ultrasonic wave in the waveguide is precisely known, the time required to receive the return signal can be converted into a linear position measurement with both high accuracy and repeatability.

T-Series models
The T-Series is available in four variations, three of which are hazardous classifications:
• Flameproof housing with flameproof connection chamber (version D)
• Flameproof (explosionproof) housing with flameproof (explosion-proof) connection chamber (version G)
• Flameproof housing with increased safety connection chamber (version E)
• Non-hazardous (version N)

The sensor assembly is offered in 1.4305 (AISI 303) stainless steel and in 1.4404 (AISI 316L). The sensor meets IP66/IP67/IP68 (100 m for 7 days)/IP69 and NEMA 4 (for sensor assembly in stainless steel 1.4305 (AISI 303)) or NEMA 4X (for sensor assembly in stainless steel 1.4404 (AISI 316L)).

Fig. 5: Temposonics® TH connection options
NOTICE

Connect cable to sensor
See page 21 ff. for more details.

Change orientation of cable bushing (C01, M01, N01)
Loosen the five hexagonal screws M4 (A/F 3) and remove the upper lid (Fig. 6). Then loosen the six hexagonal screws M4 (A/F 3) of the connection adapter (Fig. 6). Change the orientation of the connector on six different positions at 60° each. Note the example on page 21 ff.
NOTICE

Seal sensor according to ingress protection IP67 between Zone 0 and Zone 1.

*Operation Manual*
Installation of TH with threaded flange

Fix the sensor rod via threaded flange M18×1.5-6g or ¾"-16 UNF-3A. Note the fastening torque shown in Fig. 9. Lightly oil the threaded before tightening.

Fastening torque
TH-F: 65 Nm
TH-G: 50 Nm
TH-M: 55 Nm
TH-N: 40 Nm
TH-T: 50 Nm
TH-W: 55 Nm

Installation of a rod-style sensor in a fluid cylinder

The rod-style version has been developed for direct stroke measurement in a fluid cylinder. Mount the sensor via threaded flange or a hex nut.

- Mounted on the face of the piston, the position magnet travels over the rod without touching it and indicates the exact position through the rod wall – independent of the hydraulic fluid.
- The pressure resistant sensor rod is installed into a bore in the piston rod.

Hydraulics sealing for threaded flange with raised-face

Seal the flange contact surface by using an O-ring in the undercut (Fig. 11):

For threaded flange (¾"-16 UNF-3A) »G«/»T«:
O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)

For threaded flange (M18×1.5-6g) »N«/»W«:
O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 13). See ISO 6149-1 for further information.

Hydraulics sealing for threaded flange with flat-face

There are two ways to seal the flange contact surface (Fig. 12):

1. A sealing by using an O-ring (e.g. 22.4 × 2.65 mm (0.88 × 0.1 in.), 25.07 × 2.62 mm (0.99 × 0.1 in.)) in a cylinder end cap groove.
2. A sealing by using an O-ring in the undercut.

For threaded flange (¾"-16 UNF-3A) »F«/»S«:
O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)

For threaded flange (M18×1.5-6g) »M«/»W«:
O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

In the case of threaded flange M18×1.5-6g provide a screw hole based on ISO 6149-1 (Fig. 13). See ISO 6149-1 for further information.

Hydraulics sealing for threaded flange with raised-face

Seal the flange contact surface by using an O-ring in the undercut (Fig. 11):

For threaded flange (¾"-16 UNF-3A) »G«/»T«:
O-ring 16.4 × 2.2 mm (0.65 × 0.09 in.) (part no. 560 315)

For threaded flange (M18×1.5-6g) »N«/»W«:
O-ring 15.3 × 2.2 mm (0.60 × 0.09 in.) (part no. 401 133)

Position magnet

Sealing via O-ring
in the flange undercut

Fig. 9: Mounting example of threaded flange

Fig. 10: Sensor in cylinder

Sealing via O-ring in the flange undercut

Fig. 11: Possibility of sealing for threaded flange with raised-face

Sealing via O-ring in cylinder end cap groove

Fig. 12: Possibilities of sealing for threaded flange with flat-face

- Seat the flange contact surface completely on the cylinder mounting surface.
- The cylinder manufacturer determines the pressure-resistant gasket (copper gasket, O-ring, etc.).
- The position magnet should not grind on the sensor rod.
- The piston rod drilling (≥ Ø 13 mm (≥ Ø 0.51 in.)) depends on the pressure and piston speed.
- Adhere to the information relating to operating pressure.
- Protect the sensor rod against wear.
**4.3 Magnet installation**

**Typical use of magnets**

<table>
<thead>
<tr>
<th>Magnet</th>
<th>Benefits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Ring magnets</td>
<td>• Rotationally symmetrical magnetic field</td>
</tr>
<tr>
<td>U-magnets</td>
<td>• Height tolerances can be compensated, because the magnet can be lifted off</td>
</tr>
<tr>
<td>Floats</td>
<td>• For liquid level measurement</td>
</tr>
</tbody>
</table>

Mounting ring magnets & U-magnets

Install the magnet using non-magnetic material for mounting device, screws, spacers etc. The magnet must not grind on the sensor rod. Alignment errors are compensated via the air gap.

- Permissible surface pressure: Max. 40 N/mm²
- Fastening torque for M4 screws: 1 Nm; use washers, if necessary
- Minimum distance between position magnet and any magnetic material has to be 15 mm (0.6 in.) (Fig. 16).
- If no other option exists and magnetic material is used, observe the specified dimensions (Fig. 16).

**Notice for metric threaded flanges**

<table>

</tr>
</tbody>
</table>

Controlling design dimensions are in millimeters and measurements in ( ) are in inches.

---

**NOTICE**

Mount ring magnets and U-magnets concentrically. The maximum permissible air gap must not be exceeded (Fig. 15). Take care to mount the primary sensor axis in parallel to the magnet path in order to avoid damage to the carriage, magnet and sensor rod.

---

**Magnet mounting with magnetic material**

When using magnetic material the dimensions of Fig. 16 must be observed.

A. If the position magnet aligns with the drilled piston rod
B. If the position magnet is set further into the drilled piston rod, install another non-magnetic spacer (e.g. part no. 400 633) above the magnet.

---

**Fig. 13: Notice for metric threaded flange M18×1.5-6g based on DIN ISO 6149-1**

**Fig. 14: Typical use of magnets**

**Fig. 15: Mounting of U-magnet (part no. 251 416-2 or part no. 201 553)**

**Fig. 16: Installation with magnetic material**

---

**Controlling design dimensions are in millimeters and measurements in ( ) are in inches**
Sensors with stroke lengths ≥ 1 meter (3.3 ft.)
Support horizontally installed sensors with a stroke length from 1 meter (3.3 ft.) mechanically at the rod end. Without the use of a support, the sensor rod bends and the position magnet may be damaged. A false measurement result is also possible. Longer rods require evenly distributed mechanical support over the entire length (e.g. part no. 561 481). Use an U-magnet (Fig. 17) for measurement.

Start and end positions of the position magnets
Consider the start and end positions of the position magnets during the installation. To ensure that the entire stroke length is electrically usable, the position magnet must be mechanically mounted as follows.

Differentiation measurement
For a differentiation measurement two positions are measured on the sensor rod. The distance between these positions will be output.

**TH with ring magnet/U-magnet**

Do not go below a minimal distance of 75 mm (3 in.) between the magnets for differentiation measurement. Use magnets of the same type (e.g. two ring magnets with part no. 201 542-2) for differentiation measurement.

Mounting floats
A stop collar is ordered separately with a float. The stop collar consists of material, which is below the specific gravity of the fluid. It is designed to keep the float out of the dead zone. The placement of the stop collar is dependent on the float and placement of the magnet within the float. If your application requires measuring to the bottom of your vessel, ask Temposonics about our low lift-off float option.

Controlling design dimensions are in millimeters and measurements in () are in inches

4: Contact Temposonics if you need a magnet distance, which is smaller than 75 mm (3 in.)
4.4 Electrical connection

Placement of installation and cabling have decisive influence on the sensor’s electromagnetic compatibility (EMC). Hence correct installation of this active electronic system and the EMC of the entire system must be ensured by using shielded cables and grounding. Overvoltages or faulty connections can damage the sensor electronics – despite protection – against wrong polarity.

Instruction for connection

• Remove the cover plate as shown in Fig. 6 on page 13 to connect the cables to the sensor.
• If you use a cable/cable gland use low-resistance twisted pair and shielded cables. Connect the shield to ground externally via the controller equipment.
• Keep control and signal leads separate from power cables and sufficiently far away from motor cables, frequency inverters, valve cables, relays, etc.
• Install a conductor of 4 mm² cross section to one of the two external ground lugs.
• Keep all non-shielded leads as short as possible.
• Keep the ground connections as short as possible with a large cross section. Avoid ground loops.
• Use only stabilized power supplies in compliance with the specified electrical ratings.

NOTICE

1. Do not mount the sensors in the area of strong magnetic or electric noise fields.
2. Never connect/disconnect the sensor when voltage is applied.

Connector wiring

Connect the sensor directly to the control system, indicator or other evaluating systems as follows:

**Version E & N**
suitable for connection types: C01, C10, M01, M10, N01, N10

Recommended tools

<table>
<thead>
<tr>
<th>Electric torque screwdriver</th>
<th>Torque wrench</th>
<th>Slotted screwdriver</th>
<th>Crimping tool</th>
</tr>
</thead>
<tbody>
<tr>
<td>3 mm (0.12 in.), fastening torque 1.2 Nm</td>
<td>Torque depending on cable gland</td>
<td>2.0 × 40 mm (0.08 × 1.57 in.)</td>
<td>For ferrules with max. 2.5 mm²</td>
</tr>
</tbody>
</table>

Step 1: Preparing of cable

1. Strip the cable for approx. 60 mm (2.36 in.).
2. Install the shrink hose and the ferrules (max. 1.5 mm² or max. 2.5 mm² depending on connection).

The following two options present how to connect the cable to the T-Series sensor:

**Option 1**: Cable connection via disassembly of connection adapter (see page 22)

**Option 2**: Cable connection without disassembly of connection adapter (see page 23)

**NOTICE**

The example “Cable connection” is only valid for versions «E» and «N» of the TH sensor. Refer to the corresponding installation requirements and local regulations, if you like to connect a cable to the TH sensor versions «D» and «G».

The figures are examples.
Variations are possible, e.g. different cable colors.
Step 2: Cable connection (Option 1: Disassembly of connection adapter)

1. Loosen the five M4×10 screws (A/F 3). Remove the upper lid. Loosen the six M4×40 screws (A/F 3) of the connection adapter. Remove the connection adapter. See also Fig. 6.

2. Mount the cable gland at the connection adapter. Note the instructions given by the manufacturer of the cable gland!

3. Connect the cable to the sensor. Note the connection wiring on page 19.

4. Inspect surfaces and O-ring for damage. Wipe surfaces clean and apply O-ring lube. Tighten the screws of the connection adapter with a fastening torque of 1.2 Nm.

5. Inspect surfaces and O-ring for damage. Wipe surfaces clean and apply O-ring lube. Check the position of O-ring between upper lid and connection adapter. Tighten the screws of the upper lid crosswise with a fastening torque of 1.2 Nm (see figure for right sequence).

**NOTICE**
The example “Cable connection” is only valid for versions »E« and »N« of the TH sensor. Refer to the corresponding installation requirements and local regulations, if you like to connect a cable to the TH sensor versions »D« and »G«.

The figures are examples.
Variations are possible, e.g. different cable colors.
Step 2: Cable connection (Option 2: Without disassembly of connection adapter)

1. Loosen the five M4×10 screws (A/F 3).

2. Mount the cable and cable gland. Note the instructions given by the manufacturer of the cable gland!

3. Connect the cable to the sensor. Note the connection wiring on page 19.

4. Inspect surfaces and O-ring for damage. Wipe surfaces clean and apply O-ring lube. Check the position of O-ring between upper lid and connection adapter. Tighten the screws of the upper lid crosswise with a fastening torque of 1.2 Nm (see figure for right sequence).

NOTICE

The example “Cable connection” is only valid for versions »E« and »N« of the TH sensor. Refer to the corresponding installation requirements and local regulations, if you like to connect a cable to the TH sensor versions »D« and »G«.

The figures are examples. Variations are possible, e.g. different cable colors.

  - Magnet offset: No
  - Specific gravity: Max. 0.74
  - Operating temperature: −40…+125 °C (−40…+257 °F)

- **Float**
  - OD 251 469-2
  - Material: Stainless steel (AISI 316L)
  - Weight offset: Yes
  - Pressure: 29.3 bar (425 psi)
  - Magnet offset: No
  - Specific gravity: Max. 0.45
  - Operating temperature: −40…+125 °C (−40…+257 °F)

### Magnetic accessories

- **Ring magnet OD33**
  - Material: PA ferrite GF20
  - Weight: Approx. 14 g
  - Surface pressure: Max. 40 N/mm²
  - Fastening torque for M4 screws: 1 Nm
  - Operating temperature: −40…+105 °C (−40…+221 °F)

- **Ring magnet OD25.4**
  - Material: PA ferrite
  - Weight: Approx. 10 g
  - Surface pressure: Max. 40 N/mm²
  - Fastening torque for M4 screws: 1 Nm
  - Operating temperature: −40…+105 °C (−40…+221 °F)

- **U-magnet OD33**
  - Material: PA ferrite GF20
  - Weight: Approx. 11 g
  - Surface pressure: Max. 40 N/mm²
  - Fastening torque for M4 screws: 1 Nm
  - Operating temperature: −40…+105 °C (−40…+221 °F)

- **U-magnet OD63.5**
  - Material: PA 66-GF30, magnets compound-filled
  - Weight: Approx. 26 g
  - Surface pressure: 20 N/mm²
  - Fastening torque for M4 screws: 1 Nm
  - Operating temperature: −40…+75 °C (−40…+167 °F)

### Operating dimensions

- **Magnet spacer**
  - OD 400 633
  - Material: Aluminum
  - Weight: Approx. 5 g
  - Surface pressure: Max. 20 N/mm²
  - Fastening torque for M4 screws: 1 Nm

- **Float**
  - OD 251 387-2
  - Material: Stainless steel (AISI 316L)
  - Weight offset: Yes
  - Pressure: 22.4 bar (325 psi)
  - Magnet offset: No
  - Specific gravity: Max. 0.48
  - Operating temperature: −40…+125 °C (−40…+257 °F)

- **Float**
  - OD 200 938-2
  - Material: Stainless steel (AISI 316L)
  - Weight offset: Yes
  - Pressure: 8.6 bar (125 psi)
  - Magnet offset: No
  - Specific gravity: Max. 0.74
  - Operating temperature: −40…+125 °C (−40…+257 °F)

- **Float**
  - OD 251 469-2
  - Material: Stainless steel (AISI 316L)
  - Weight offset: Yes
  - Pressure: 29.3 bar (425 psi)
  - Magnet offset: No
  - Specific gravity: Max. 0.45
  - Operating temperature: −40…+125 °C (−40…+257 °F)

**Controlling design dimensions are in millimeters and measurements in () are in inches.**

5/ Be sure that the float specific gravity is at least 0.05 less than that of the measured liquid as a safety margin at ambient temperature.

- For interface measurement: A minimum of 0.05 specific gravity differential is required between the upper and lower liquids.
- When the magnet is not shown, the magnet is positioned at the center line of float.

- An offset weight is installed in the float to bias or tilt the float installed on the sensor tube. So the float remains in contact with the sensor tube at all times and guarantees permanent potential equalization of the float. The offset is required for installations that must conform to hazardous location standards.

---

Controlling design dimensions are in millimeters and measurements in ( ) are in inches

7/ The programming tool is not approved for use in hazardous environments
5. Operation

5.1 Getting started

The sensor is factory-set to its order sizes and adjusted, i.e. the distance between magnet and flange is specified in resolution steps. Example: SSI value 5000 with a resolution of 20 μm corresponds to a magnet distance of 100 mm from the flange.

**NOTICE** If necessary, the SSI sensors can be re-adjusted using the service tool described below.

**NOTICE**
Observe during commissioning
1. Before initial switch-on, check carefully if the sensor has been connected correctly.
2. Position the magnet in the measuring range of the sensor during first commissioning and after replacement of the magnet.
3. Ensure that the sensor control system cannot react in an uncontrolled way when switching on.
4. Ensure that the sensor is ready and in operation mode after switching on.
5. Check the pre-set start and end positions of the measuring range (see Fig. 18) and correct them via the customer’s control system or the Temposonics service tool, if necessary. The operation of the service tool is described in detail on the following pages.

5.2 Programming and configuration

SSI interface
The interface of Temposonics position sensors corresponds to SSI industry standard for absolute encoders. Its displacement value is encoded in a 24/25/26 bit binary or gray format and transmitted as a differential signal in SSI standard (RS 422).

---

**Fig. 25: Schematic connection**

**Fig. 26: Input wiring clock (+)/clock (−)**

The absolute, parallel position data is continually updated by the sensor and converted by the shift-register into a serial bit stream (Fig. 27).

**Fig. 27: Timing diagram**

Dependent on the baud rate chosen in the controller the following cable lengths are possible (Fig. 28):

<table>
<thead>
<tr>
<th>Cable length</th>

Operation Manual

Temposonics programming tool

Temposonics position sensors can be adapted to modified measurement tasks very easily via the connecting leads – without opening the sensor. For this, the following Temposonics programming tool is available (see page 26).

**NOTICE**
The programming tool is not approved for use in hazardous environments.

Programming kit, part no. 253 135-1 (EU)/253 310-1 (US)

The PC programmer is a hardware converter between sensor and serial PC interface. It can be used for adjusting sensor parameters via computer and the Temposonics programming software. The software for reading and adjusting the sensors requires a Windows computer with a free USB port. You can adjust the following parameters:

- Data length and data format (optionally with parity- and error bit)
- Resolution and measuring direction
- Synchronous/asynchronous measurement
- Offset, begin of the measurement range
- Alarm value (magnet was removed, magnet is missing)
- Measurement filter (moving average of 2, 4 or 8 measurements for noise reduction)
- Velocity measurement or position measurement or differentiation measurement

**Step 1: Connect PC programmer**

- Connect the PC programmer with the sensor via the corresponding adapter cable.
- Connect the PC programmer to a USB port of the computer.
- Connect the power supply via connector.
- The outer contact of the connector is 0 V (ground), the inner contact is 24 VDC.

**NOTICE**
Never connect/disconnect the sensor when voltage is applied.

Download current software version from [www.temposonics.com](http://www.temposonics.com).

Copy the programSSIConfigurator.exe to your computer and start it by double-clicking on it. The program now displays a list of available COMs. Normally, the COM port with the lowest number (e.g. COM1) should be selected. If a connection fails, it could be a missing driver.

In this case, download and install the USB serial converter driver from [www.temposonics.com](http://www.temposonics.com).

After starting the Temposonics SSI-Configurator, the user interface of the connected sensor with its adjustable parameters will open (Fig. 30).
In the **File** menu, you can save the sensor configuration on hard disk, print it out or load it into the sensor. Moreover, this menu permits returning to the factory setting.

Via **Test Sensor** the position of the magnet is displayed graphically. (Fig. 31).

Frame **Sensor Information** contains the invariable sensor parameters, which are read in automatically when connecting the sensor.

Click on **EEPROM Update** to send and store altered parameters (highlighted with a blue background) permanently in the sensor. Subsequently, the stored values are displayed again with a white background.

Use the option box **binary** or **gray** to determine the SSI coding.

In this field you can set the **SSI transmission bit width** for the position output.

Use the option box **SSI clock asynchron** and **SSI clock synchron** to change the start of measurement.

In **asynchronous mode** the sensor starts measuring and provides the position independent of the PLC. In “synchronous mode 1” the output of the position of the Temposonics® SSI sensor is matched to the data request cycle of the controller. The contouring error complies with the cycle time of the stroke length.

The jitter specifies the time interval between the start of measuring and the SSI clock, which is given by the PLC (for “SSI clock synchron”).

Via **UART Result Counter** you define a time interval for the function **Test Sensor** to send a position value Fig. 31 (graphical presentation of position values). Example: If you choose “50” in the field **UART Result Counter**, each 50. measurement will be displayed.

**Communication Status** indicates that the sensor is connected successfully.

---

**Tab “Error Indication”**

If the check box **activate second error value (-1)** is active, an error value of “−1” is output if the sensor is used with more magnets as specified before. If the check box is not active and the sensor is used with more magnets as specified before, the value which was defined in field **Error Value** will be displayed. The **Error Value** will also display if the sensor is used with less magnets as determined before.

In the case of failure the sensor transmits the **Error Value**.

Use the field **Error Counter** to determine how often in the case of failure (1…255 times) the old measurement value will be repeated, before the **Error Value** will be displayed.

In this field you can define a period (1…100 ms), during which the power supply of the sensor can be fallen short of, without the **Error Value** to display. Set the value to “0” to deactivate the function **Power failure (in ms)**.
Tab “Measurement”

Use the field Filter to choose a noise reduction filter of two, four or eight measurements. You can adjust the filter via the Temposonics SSI-Configurator and adapt it to your application.

In the field Measuring you can choose between the following options:
- **Position**: Measurement and output of position value
- **Differential**: Measurement of two positions and output of the distance between them.
- **Velocity**: Measurement and output of velocity of the position magnet, which moves over the sensor rod or the sensor profile.

Via Direction you can determine the measuring direction.
- **Forward**: Ascending position values from sensor electronics housing to rod end
- **Reverse**: Ascending position values from rod end to sensor electronics housing

In the field Resolution (in μm) you can set the resolution of the sensor. See technical data on page 33 for resolution steps.

Offset (in μm) shows the offset which was determined during the sensor end control at the factory. You can change the offset (null position) in entering a new value in the field Offset (in μm). After that you have to press the button EEPROM Update to confirm. Another possibility is described in 20.

If you like to change the offset, move the magnet into the desired position. Confirm the position via the button Set.

The factory settings can be restored at any time under the menu item File.

**NOTICE** If the measuring direction changes, the offset will be converted automatically. If the null position moves into the measuring range, values < 0 of the binary data format will be output as negative.

Tab “Measurement 2”

Temposonics SSI-Configurator T-Series order code

| Parity bit | complies with Parity even bit: 26 bit |
| Error bit | complies with Alarm bit: 25 bit |

as parity bit. In this case the SSI bit width for transferring the position data is limited to 24 bit. The Parity & Error Bit influences the cycle time of the synchronous measurement. You cannot choose Parity & Error Bit and Measure Temperature (Bit 24-31) at the same time.

If the checkbox is activated the temperature measured in the sensor electronics housing will be output (bit 25-32). In this case the SSI bit width for transferring the position data is limited to 24 bit. You cannot choose Parity & Error Bit and Measure Temperature (Bit 24-31) at the same time.

Activate the check box to exclude reflections of the position measurement. Thus the cycle time extends.

To select the “synchronous mode 2” activate SSI clock synchron in SSI settings first. After that activate the check box Extrapolation/SyncStart.

**NOTICE** If the measuring direction changes, the offset will be converted automatically. If the null position moves into the measuring range, values < 0 of the binary data format will be output as negative.

The “synchronous mode 2” is most suitable for applications where the polling cycle of the controller can be faster than the measurement cycle time of the Temposonics® SSI sensor. The values for the PLC will be oversampled up to 10 kHz. The delay is similar to the asynchronous mode.

In the field measurement start point and measurement end point you can define a new working area. Move the magnet to the desired position and click Set to define a new measurement start or end point. Via the button Delete you can delete the measurement start and end point again. The current position of the magnet is displayed within the working area, a magnet outside of the working area will be ignored.
To select the “synchronous mode 3”, activate the check box Extrapolation/SyncStart first and after that Extrapolation (real). The function of the “synchronous mode 3” is similar to “synchronous mode 2”. For “synchronous mode 3” each delay will be compensated.

6. Maintenance and troubleshooting

6.1 Error conditions, troubleshooting

See 11 and 12 on page 29.

6.2 Maintenance

The required inspections need to be performed by qualified personnel according to IEC 60079-17/TRBS 1203. These inspections should include at least a visual inspection of the housing, associated electrical equipment entrance points, retention hardware and equipment grounding. Inside the Ex-atmosphere the equipment has to be cleaned regularly. The user determines the intervals for checking according to the environmental conditions present at the place of operation. After maintenance and repair, all protective devices removed for this purpose must be refitted.

<table>

Fig. 36: Schedule of inspection

**NOTICE**

Perform maintenance work that requires a dismantling of the system only in an Ex-free atmosphere. If this is not possible take protective measures in compliance with local regulations.

**Maintenance**: Defines a combination of any actions carried out to retain an item in, or restore it to, conditions in which it is able to meet the requirements of the relevant specification and perform its required functions.

**Inspection**: Defines an activity with the purpose of checking a product carefully, aiming at a reliable statement of the condition of the product. The inspection is carried out without dismantling, or, if necessary, with partial dismantling, and supplemented by other measures, e.g. measurements.

**Visual inspection**: Optical inspection of product aims at the recognition of visible defects like missing bolts without using auxiliary equipment and tools.

**Close inspection**: Defines an inspection which encompasses those aspects covered by a visual inspection and, in addition, identifies those defects, such as loose bolts, which will be apparent only by the use of access equipment, for example steps, where necessary, and tools.

**Detailed inspection**: Defines an inspection which encompasses those aspects covered by a close inspection and, in addition, identifies those defects, such as loose terminations, which will only be apparent by opening the enclosure, and/or using, where necessary, tools and test equipment.

6.3 Repair

Repairs of the sensor may only be performed by Temposonics or a repair facility explicitly authorized by Temposonics. Repairs of the flameproof joints must be made by the manufacturer in compliance with the constructive specifications. Repairs must not be made on the basis of values specified in tables 1 and 2 of IEC/EN 60079-1.

6.4 List of spare parts

No spare parts are available for this sensor.

6.5 Transport and storage

Note the storage temperature of the sensor, which is from −40…+93 °C (−40…+200 °F).

7. Removal from service/dismantling

The product contains electronic components and must be disposed of in accordance with the local regulations.

UK Declaration of Conformity

Temposonics declares as manufacturer in sole responsibility that the position sensor type

Temposonics TH-x-xxxxx-xxx-1-N-N-N-Cxxxxxx-xxx
TH-x-xxxxx-xxx-1-N-N-N-Sxxxxxx-xxx

comply with the regulations of the following UK Directives:

UKSI 2016 :1091 Electromagnetic Compatibility
UKSI 2012 :3032 Restriction of the use of hazardous substances in electrical and electronic equipment

Applied harmonized approved standards:
EN 61000-6-2 :2005
EN 61000-6-3 :2007+A1+AC :2012

Approvals Manager

UK Konformitätserklärung

Temposonics erklärt als Hersteller in alleiniger Verantwortung, dass der Positionssensor Typ

Temposonics TH-x-xxxxx-xxx-1-N-N-N-Cxxxxxx-xxx
TH-x-xxxxx-xxx-1-N-N-N-Sxxxxxx-xxx
den Vorschriften folgender UK Richtlinien entsprechen:

UKSI 2016 :1091 Elektromagnetische Verträglichkeit
UKSI 2012 :3032 Einschränkung zur Verwendung von gefährlichen Stoffen in Elektro- und Elektronikgeräten

Angewandte harmonisierte zugelassene Normen:
EN 61000-6-2 :2005
EN 61000-6-3 :2007+A1+AC :2012

UKSI 2016 :1091 Compatibilité électromagnétique
UKSI 2012 :3032 Restriction de l'utilisation de substances dangereuses dans les équipements électriques et électroniques

Normes harmonisées approuvées appliquées:
EN 61000-6-2 :2005
EN 61000-6-3 :2007+A1+AC :2012

Déclaration de Conformité UK

Temposonics déclare en qualité de fabricant sous sa seule responsabilité que les capteurs de position de type

Temposonics TH-x-xxxxx-xxx-1-N-N-N-Cxxxxxx-xxx
TH-x-xxxxx-xxx-1-N-N-N-Sxxxxxx-xxx
sont conformes aux prescriptions des directives UK suivantes:

UKSI 2016 :1091 Compatibilité électromagnétique
UKSI 2012 :3032 Restriction de l'utilisation de substances dangereuses dans les équipements électriques et électroniques

Normes harmonisées approuvées appliquées:
EN 61000-6-2 :2005
EN 61000-6-3 :2007+A1+AC :2012
10. Appendix

Safety declaration

Dear Customer,
If you return one or several sensors for checking or repair, we need you to sign a safety declaration. The purpose of this declaration is to ensure that the returned items do not contain residues of harmful substances and/or that people handling these items will not be in danger.

Temposonics order number: __________________________
Serial number(s): __________________________________
Sensor type(s): ____________________________________________
Sensor length(s):___________________________________________

The sensor has been in contact with the following materials:

Do not specify chemical formulas. Please include safety data sheets of the substances, if applicable.

In the event of suspected penetration of substances into the sensor, consult Temposonics to determine measures to be taken before shipment.

Short description of malfunction:

Corporate information
